Acting chief of NEB

A STAFF member of the National Enterprise Board with a background in physics is taking over management of the Board for the time being, while Sir Keith Joseph seeks replacements for the six members who recently resigned. The new acting chief executive is the Board's secretary, Brian Willott, thought to be a suitable leader for the NEB's future role which should be mainly directed towards promoting high technology.

Software pirates

SALES of cassette based software are down 50% on last year, according to Julian Allinson, publisher of the independent Pet magazine, Printout. Allinson claims that for every album legitimately sold, more than two are pirated. He points an accusing finger at schools and computer clubs.

Joint venture

WITHIN the next month a joint venture will be announced between the US company Shared Medical Systems and BOC Data-solve, to launch a hospital administration system called Aetion. This follows the UK launch, last week, of the Patient Care Information System (PCIS) by BDS World Corp (UK). The PCIS systems will be similar in that they provide hospitals with a package for admission, treatment, and every other discharge (or transfer), of patients and their records.

IBM 3081

ONCE is understandable. Twice is unfortunate. But three times is downright careless. To paraphrase Lady Bracknell and with a nod in the direction of Portsmouth, it should be clearly understood that the latest IBM machine is the 3081. Not the 3801 as in some references over the last three issues of CW. Apologies.

Datsaaba all set for takeover

NEGOTIATIONS are likely to be completed this week for the takeover of Swedish computer and terminal manufacturer Datsaaba by telecommunications company L. M. Ericsson.

Datsaaba is currently owned half-and-half by Saab-Scania and the Swedish government, and the takeover is thought to have been initiated by Ericsson's former chairman Björn Lundvall, who died in a car crash in September. Discussions on possible takeovers have been held with many companies including ICL, but the Swedish government was keen to keep ownership of Datsaaba in Sweden, if that coincided with the best interests of the company itself.

Datsaaba's chairman Hans Werthen has taken over as acting chairman of L. M. Ericsson as well, and is expected to be confirmed in that post at the next annual meeting of the company in the summer.

Because of its programme of product development, Datsaaba has been making a loss since it was established as an independent company in 1977, but this has been reducing on schedule for breaking even by 1982. Datsaaba's share capital is £35 million, while its turnover last year was £88 million and is expected to reach £112 million for the current year with a loss of £13 million.

Set up as a division of Saab-Scania about 20 years ago to provide the computing power for its aero-

space activities, Datsaaba has become less relevant to its parent, while Ericsson feels it will complement its recently established information systems division.

Ericsson aims to invest some of its £250 million cash pile in further acquisitions from the computer industry, either at home or abroad, and is particularly looking for software companies experienced in data communications. It bought one such company in Sweden, AU Systems, three months ago.

Datsaaba is welcoming the takeover. A spokesman pointed out that ICL and Philips are active both in the office equipment and telecommunications markets, while Philips is Datsaaba's biggest rival for banking terminals.

Logabax rescue bid

MOUNTING financial problems at Logabax, first signalled when the firm reported a loss for 1979, have culminated in a £24 million rescue operation to save the French small systems and peripherals manufacturer from liquidation.

Computer and military electronics group Intertechnique, which called off talks to acquire Logabax a few weeks ago, has now agreed to pay £11 million to 1982 for a 65% controlling share in the firm, provided its 1981 balance sheet shows a return to health. Logabax is currently controlled by Electrolab of Belgium which is anxious to dispose of its majority interest.

But the cuts in Logabax's 2,000-strong workforce, which are seen as the main cause for the company's problems, could easily be thwarted by the French government's reluctance to approve dismissals at the moment. The presidential election is only five months away.

Increasingly its holding in Logabax for the time being to 90%. Electrolab is adding £8 million to £16 million already handed over to keep the ailing computer firm in business. Electrolab will pump in another £2½ million in the spring.

Three other sources of cash each contributing about £2½ million now are the French nationalised banks, the government investment body CIASI, and the group formed by Intertechnique, Marcel Dassault and Societé Générale earlier this year to take control of Logabax. CIASI and the nationalised banks will each add another £2½ million in the spring.

M200H for Guardian

THE first UK order for the IBM compatible version of the Japanese built M-200H from Iliachi has been placed with National Advanced Systems by the Guardian Royal Exchange Insurance company of Lytham, Lancs. NAS sells the 10 MIPS Hitachi machine as the AS/9000.

The Bill was given a second reading by a government majority of 69.

DATA GENERAL

Prices start from £4460 for the MP100 and £5078 for the MP200 systems. Systems range from floppy disc through cartridge to Winchester storage. Commata offer off the shelf delivery of complete Micro Nova Packages Systems as well as Expansion Memories, Communications Options, Interfaces and comprehensive Operating Systems Software.

Data General Printers and Dasher Terminals are also available ex-stock.

MP slates Telecoms Bill

LACK of definite commitments in the British Telecommunications Bill drew contrasting attacks from Parliament and within the industry last week.

Opposition industry spokesman John Silkin said the Bill gave the Secretary of State almost dictatorial powers. Sir Keith Joseph would agonise for long periods over the use of those powers, Silkin added, before coming to wrong decisions which he would realise were wrong only 20 years after everyone else had.

All the important matters were left out of the Bill, which relied on guidelines, memoranda and ruling powers, said Silkin, adding that it was a piece of 19th century doctrine in private enterprise philosophy.

Meanwhile, the industry the government aims to help fears that little change will be made to British Telecom's monopoly. Paul Carter, sales director of General DataComm's UK subsidiary, said: "It would be better if the government had bitten the bullet and said British Telecom will provide the network, but have no say over what is transmitted over it."

John Gorn, Tory backbencher and chairman of the newly-formed Telecommunications Council, said the Bill would give British Telecom a monopoly over forms of communication not yet realised, which was no kind of liberalisation.

The Bill was given a second reading by a government majority of 69.

SHELL AND BP REJECT INVITATION TO INVEST MORE IN COMPUTER INDUSTRY

Govt seeks oil cash for ICL

by Kevin Cahill

THE government has initiated talks aimed at attracting oil company funds into the British computer industry. A team led by Sir Peter Carey, permanent secretary at the Department of Industry, and including Roy Atkinson, under-secretary at the Dul's Information Technology Division, has approached Shell and BP with the request that they consider substantial investment in the industry.

Both the oil companies and the DoI deny that the request was on ICL's behalf but it is clear that ICL was at the centre of the talks. Shell has so far rejected the DoI approach saying that their funds were dedicated to the search for energy and that as a matter of

policy the company did not get involved in areas in which it has no experience or expertise.

BP, which already has a major stake in the industry in the form of Sclcon, is also understood to have rejected the government's approach. This is partly because a share in ICL would not fit into BP's diversification plans and partly because BP would not have the management expertise which it is felt ICL needs.

Money is understood not to have been a reason for rejecting the overtures, but ICL's need for further funds following the profit fall reported for last year may become acute over the next year or two.

With business still but stagnant according to the report released with the 1979/1980 figures, ICL is unlikely to have much success if it

Order growth halts

WITH pre-tax profits slumped by nearly 50% ICL has blamed the recession, falling margins, inflation and the big increase in the value of the pound for its disappointing performance in the 1980 financial year which ended on September 30.

Order growth has stopped and ICL's profitability is described by chairman Philip Chappell as "cloudy and uncertain" at present.

Notable features of the 1980 figures include a pre-tax profit nose-dive from £20.5 million in the first half of the year to a mere £4.6

million in the second and zero turnover growth in the other countries of the EEC.

ICL made an overall loss on overseas operations in 1980 and Chappell cited as a major contributory factor the speed of change in "the real, effective exchange rate" which takes inflation as well as the value of the pound into account.

Chappell also blamed falling margins abroad, commenting, "It is now difficult to charge price on book overseas."

ICL's African business, biggest by far in South Africa, produced

the only substantial turnover increase, from £50 million to £75 million, while the US saw a 50% drop to a 1980 turnover figure of just over £10 million.

While refusing to comment on any cutbacks in the US sales operations, Chappell admitted that the US market was "bloody difficult."

The 15% increase in ICL's total turnover to 1980 to £716 million was due almost entirely to UK turnover jumping from £329 million to £404 million.

Burroughs' \$125m write-offs

FORESHADOWED by the redundancy plans for its Cumbernauld (Scotland) factory, a series of write-offs costing up to \$125 million are to be borne by Burroughs in its worldwide financial results for 1980. They will slash the company's 1980 net profits by nearly half.

As determined by former US Treasury Secretary Michael Blumenthal, who took over as the chief executive of Burroughs in September 1980, the write-offs are the result of a series of im-

pending plant closures and consolidations, the phasing out of adding machine and calculator products, and the discontinuation of the Burroughs Scientific Processor.

Financial troubles at Burroughs first became apparent to the summer when the company reported a 12% drop in its second quarter net profits, the first quarterly decline in profitability since 1963. Things got even worse in the third quarter when profits fell nearly 32% to \$42.2 million.

Blumenthal joined Burroughs in early 1980 as vice-chairman, and before being appointed chief executive he conducted an exhaustive review of the company's operations all over the world.

Burroughs plans for 355 redundancies at Cumbernauld have been strongly opposed by the local Labour MP Norman Hogg (East Dumbartonshire).

Burroughs is getting rid of nearly 500 workers at three plants in the Detroit area, among other lay-offs.

CA buys Improve range

THE Improve product range for IBM users and IS sales and development staff at CPP UK are being followed by Computer Associates following G.A.P.'s decision to sell off its troubled division (CW, December 11).

CA will market Improve software all over the world, including the US where only one customer has been picked up since mid-1980 by Imso Products Inc (CW, November 27). ISL agreement with CPP was due to expire at the end of December 1980.

CA's UK director, Harry Gordon, was not prepared to comment on any price paid to CAE for the acquisition but said that the IS

CPP staff would almost certainly be moved from Richmond, Surrey, to CA's offices at Maidenhead.

Gordon pointed out that the FIVE Improve products would complement CA's existing product line quite well. A good example was the Improve system, Dataspace, which handles OS disc file management and neatly complements CA's tape file management system, CA Dymat/OS.

Founded in Switzerland, CA is now US owned, the original Geneva-based parent having been taken over by its US offspring, Transamerica Computer Associates.

Lord Soames, Lord President of the Council (left) talking with Philip Chappell, chairman of ICL, after the announcement that a contract had been signed by the Civil Service Department and ICL for the computerisation of the Inland Revenue's PAYE Income tax system. This is the largest single contract ever received by ICL.

PAYE contract signed

by Keith Jones

ON December 22, only nine days before the end of the government's single tender policy, ICL secured its grip on the multi-million pound PAYE contract with the signing of a contract by Civil Service chief Lord Soames.

The order is for 47 ICL 2966 mainframes to be installed at 12 regional centres all over the UK. The first machine will be installed early in 1982 at the Telford in the West Midlands. The first group of districts will go live some time in 1984.

As expected, each 2966 will handle up to 500 terminals and there will be online local communication between them. But the links between regions will be offline, at least in the early years of operation. Systems software, already closely assessed by the Inland Revenue at trials at West Midlands Gaa, will include IDMSX and TPMS.

Reports that the Civil Service Department had threatened ICL with not signing the contract before the end of the year unless ICL offered £10 million off the price, have been denied by the Department. According to ICL the order is worth "between £40 and £50 million."

Briefing

Amdahl on death charge
GENE AMDAHL, founder of Amdahl Corp, has been charged with manslaughter at a municipal court in Palo Alto, California. While driving his Rolls-Royce on November 17, Amdahl allegedly struck a motorcyclist who later died in hospital.

Amdahl severed his ties with Amdahl Corp completely earlier this year in found Aesys, a firm that will build very powerful mainframes to compete with IBM (CW, September 11, 1980). First shipments are expected in about three years.

Satellite services

AGREEMENT was reached last week among the 119 members of the European Telecommunications Satellite Council, Eutelsat, on a programme of satellite-based private telecommunications services to be available to businesses with branches in member countries from 1983, using the two satellites to be launched for the French government and Eutelsat by the European Space Agency. Trials for the service are to begin during 1981.

ADVERTISING - Circulation

Computer Weekly has a circulation
each week of over 84,000 including
the highest fully requested circulation
in the UK.

ADVERTISING - Subscriptions

Computer Weekly is sent free of
charge to the following categories
in the UK and Eire only:
Company directors, company
managers, management service
executives, civil servants
responsible for computing, manage-
ment/computer consultants, in-
formers and teachers. DP
managers, systems, systems
analysts/BAW, systems pro-
grammers, operators, computer
salesmen, field engineers.

COMPUTERVIEW

IN a year which ends with the worst unem-
ployment figures since the Hungry Thirties,
Computer Weekly readers should be think-
ing that their industry has suffered only a
slowdown in its meteoric growth - and not
a collapse.

The manufacturing side of the business
may have seen some big cuts, notably the
closure of the ICL plant at Winsford. And,
more disturbingly, there is a small army of
workless graduates who might have been
acquiring valuable skills at ICL and CAP
had they not received marketing orders be-
fore their industrial careers reached the
launch-pad. These apart, most computer
professionals with experience, repeat expe-
rience, were still much in demand.

A few heavily-published systems house
follies may have given the impression that
the service industry was about to follow the
lead of British Steel into the mire of massive
redundancy.

A closer examination of the companies
going under suggested that factors other
than the economic situation had contrib-
uted to their problems - like inadequate
management, for example.

Nevertheless, the classic argument that
companies invest in computers during a re-
cession to improve their efficiency has been
shown as fallacious. In good times, even the
least competent systems suppliers have often

A slowdown rather than a collapse

managed to survive. Now the unofficial gov-
ernment policy of letting the weak go to the
wall is taking effect.

Those who doubt that business is bad, at
least by computer industry standards,
should consider ICL's depressing financial
results for the year ended September 30,
1980. Profits plummeted from more than
£20 million in the first half of the year to a
mere £4 million in the second.

ICL has admitted that orders have now
levelled off. All of this indicates that ICL's
position became progressively worse as the
year went by. The company was hit very
hard by inflation, high interest rates, and
worse of all by the exceptionally rapid
change in the cost of UK products abroad.

Had the inland Revenue PAYE contract,
one of two self-financing cliffhangers domi-
nating the news in 1980, not been awarded
to ICL under the new (January 1) deficit
sharing tender policy, this would have been
the company's blackest year ever.

As it was, the year turned out to be the

worst since 1972 when the company made
only £3.3 million from £150 million sales. In
pure money terms, the PAYE contract is
worth about £40 million over several years
and is not going to improve ICL's financial
position dramatically; at least, its world
computer market credibility is no less now
than it was when the year began.

For those who had not guessed already,
the other cliffhanger was the long wait for
the IBM H-series. When the first member
was launched as the 3081 in November, only
a novel and rather exotic cooling technique
and using the rather pretentious term
"dynamic" to describe two very tightly-
coupled processors hid the fact that the
machine was most definitely revolutionary
rather than evolutionary.

The TTL componentry provided more
logic gate per chip but nothing spectacular
compared with the Hitachi M-200H for
example. Most significantly of all, no big
changes were made in the systems software
supported by the machine.

It offered merely a lot more power for
slightly more money and IBM users may
thank Hitachi, Amdahl and its Japanese
sidekick, Fujitsu, for these developments.
Fujitsu can also be blamed, if "blamed" is
the right word, for putting paid to Storage
Technology's plans to take over Amdahl and
complete head-on with IBM more or less
across the board at the top end of the in-
dustry giant's market.

While not interfering directly in merger
talks between the two firms Fujitsu, which
owns 27% of Amdahl, turned Storage off the
idea of a merger at the last minute by asking
Amdahl for confirmation of its long-term
commitment to supply contract.

Using this method, Fujitsu thwarted Storage
ambitions to become Amdahl's main
semiconductor supplier. Storage retained its
controlling willingness to get into the IBM
compatible business later in the year by an-
nouncing plans to launch a family of
machines in 1983.

Meanwhile the EEC Commission made
known its ambitions for European manu-
facturers to produce sub-microelectron-
ics by 1985 and underlined the importance
of key process plant being available from
EEC manufacturers. Alas, national interest
look like keeping Europe permanently be-
hind the US and Japan in the chip de-
velopment race.

There's a sobering thought for 1981.

LETTERS to the EDITOR

Simplifying the family tree

MAY I suggest to your correspondent Richard Blatch, and any others
with a similar interest, that he effectively rotates his family tree through
90 degrees, ie instead of:-

he reforms it:

This simplifies print-out on a line printer (say three generations per
page width) instead of a graph-plotter and should ease the coding prob-
lem considerably.

This method of presentation is used by my brother, Mr F. G. St. C.
Strange of Harbledown, Canterbury, and I have our family tree over 150
generations (from 1675) typed on 14 sheets of foolcap with over 450
names on it.

J. H. St. C. STRANGE

Belling Village, London, W5.

Two traditions brought together

MAY I reply to some of the points
raised in recent weeks by corre-
spondents interested in the Basic/
Pascal controversy.

My advocacy of the RC Piccolo
and SRC1 microcomputers is
based on their support of Pascal
and Copal-80, not Coral-80 as two
correspondents suggested. The mis-
take is not surprising because
Coral is not yet widely known in
UK though it is certainly great in-
terest wherever it is demonstrated
or discussed.

The reason for the special in-
terest is that Coral does precisely
what David Burdett is hoping for:
it adds Pascal structures to the
simple syntax and operating envi-
ronment of Basic. This two great
computer languages traditions are
brought together: the simple
practicality of the Fortran/Basic
line; the structural and theoretical
soundness of the Algol/Pascal de-
velopment.

But Coral is more than that. It

What's the professor driving at?

I HAVE now read Donald Ml-
chla's article (CW, December 11)
several times; I still have no idea
what he's driving at.

There are a couple of sen-
tences which fascinate me,
however: "Once we leave the
cooked-up classroom problems
for the real world the matter
stands differently. If some phy-
sicalist dares let him write a
program to control a robot
mooeyologist. Are we to suppose
from this that the real world is
adequately represented by robot
mooeyologists?"

I'm not quite sure why the
whole of physics should be so
roundly condemned because of
its failure to enlighten a monkey
on how to cut a bunch of bananas
from a string. Poor old Euclid, he
catches it in the neck, too, but
even Euclid never dissected an
apple!

With this sort of maleprophy
going on it's no wonder we are
referred to McCarthy and Hayes
for such terms as "heuristics" and
"epistemological".

CONFUSED

(Name and address supplied)

THE EDITOR welcomes let-
ters commenting on
subjects published in Com-
puter Weekly, or on original
topics.

Ideally suited to data transmission

I REFER to your article (CW, No-
vember 27) entitled 'Ten Firms
Enter PoS Market'. The article is in
effect a review of the publication
recently issued by us, Guide to
Retail Capture Systems. By and
large the information you give
about the Guide is accurate;
however, I was distressed to note
that the information in the penulti-
mate paragraph is inaccurate and
in fact suggests the precise op-
posite of the truth.

The paragraph quotes the Guide
as saying that portable data entry
terminals may be used as low-cost
substitutes for PoS terminals, but
that they have no data trans-
mission facility.

In fact what the Guide says is
that PDETs are ideally suited to
carry out a data transmission func-
tion for retailers but because they
have limited facilities in other
directions, are not recommended
as substitutes for PoS terminals
except in certain circumstances.

ICL pre-tax profits slashed by half

From front page

This increase was achieved de-
spite the fact that ICL's profits
from outright sales to sales to leas-
ing companies and according to
ICL, no significant increase in
selling prices.

Chappell said that ICL policy in
1980 had been growth at the ex-
pense of profitability.

Referring, albeit indirectly, to
the 2,500 redundancies announced
by the company in November,
Chappell said that ICL costs were
being reduced significantly but
that profitability was bound to suffer
for some time ahead because of
the time needed to make cuts.

One group not suffering notice-
ably from ICL's profit slump are
the company's shareholders who
will receive the same 2.975p per
share dividend as in the previous
year.

ICL's justification is that its
dividend policy should "broadly
reflect the longer-term strength of
the business and its future pros-
pects".

In contrast unions at ICL are to
tighten up on overtime and use of
contract staff as the company goes
ahead with its manufacturing and
marketing staff reductions.

The unions have told ICL that
they expect the company to com-
ply with the security of employ-
ment agreement drawn up be-
tween the two sides in 1977 and
reminded their members about
contract staff and overtime
clauses.

This follows a meeting between
the two sides in which ICL pre-
sented the unions - ASTMS, APEX,
AURWITASS, ESSA and ACTSS
- what one union official de-
scribed as a "detailed analysis" of

Honeywell triples mini power

UP to three times the power of the
existing Honeywell Level 6
mini-computer series at prices only
marginally greater. This is what
Honeywell now offers in the form
of the DPS 6 family which re-
affirms the company's substantial
commitment to the minicomputer
market.

Other important features of the
10-member DPS 6 family are two
32-bit machines at the top end that
compete directly with the Digital
Equipment VAX-11/780, and the
capacity of four of the 16-bit mem-
bers to be field upgraded to 32-bit
processors. According to
Honeywell there are no major
architectural differences between
DPS 6 and Level 6 because the
older series was designed originally
to accommodate a 32-bit structure.

To take advantage of the per-
formance of the new machines
Honeywell has unveiled an up-
dated version of its GCOS 6 Mod
400 operating system with im-
proved memory usage and file
handling. But the DPS 6 machines
will still be able to run Level 6
applications programs without
modification.

Stephen Jerritts, president of
Honeywell Information Systems,
has given assurances that the com-
pany would continue to provide
system enhancements for Level 6
machines.

DPS 6 has not been officially
introduced yet in the UK and
Honeywell was unable to quote a
launch date. Like Level 6, DPS 6
machines could be built at
Honeywell's plant at Newhouse,
near Glasgow.

The four bottom end machines
in the DPS 6 line are the 6/30,
6/32, 6/34 and 6/38 with configu-
rations ranging from 128K bytes and
10 megabytes on disc on the 6/30
to 768K bytes and 80 megabytes
on the 6/38. The latter can support
up to 24 communications lines
compared with a maximum of
eight on the three smaller
machines.

French bank boosts electronic transfer with NCR PoS equipment

MAJOR French bank Credit Agri-
cole plans to extend its offline
electronic transfer system involv-
ing NCR point-of-sale equipment
at three hypermarkets and reports
growing interest from other
European banks.

For the past ten months Credit
Agricole customers have been us-
ing bank cards, normally used at
the bank's automatic teller
machines and branch counter, to
purchase goods at two hyper-
markets to Clermont-Ferrand and
Limoges, Central France.

Paperless transactions at the hy-
permarkets have risen by around
5% a week over that period. Jean
Paul Grandy, DP manager for
Credit Agricole in Limoges, com-
mented: "Our recommendation
has been that we should plan the
expansion of the system with other
retailers, not only supermarkets
and department stores, but also
smaller shops using standalone ter-
minals."

When we started with the trial,
other French banks were not in-
terested. Now we find an in-
creasing number are interested in
joining the system, as well as other
European banks."

NCR is developing a bank card
reader to PoS terminal interface
which would make extension of
the Credit Agricole system pos-
sible.

A company spokesman said,
the hardware involved in the
system.

Six Acorn Atoms and a floppy disc-based filestore are linked by Econet at Long Road Sixth Form College in Cambridge... for a total of £2,500.

From tiny Acorns...

THE trial system of Acorn Com-
puters' low-cost local networking
system, Econet (CW, November
20), is up and running at a school
in Cambridge and the company is
ready to start volume production
of the system.

Acorn director Chris Curry be-
lieves that the availability of such
systems will stimulate the pro-
duction of so much good quality
computer assisted learning
programs that all existing
material will be insignificant by
comparison.

Econet can be implemented for
between £50 and £50 per node on
top of the cost of the micros,
which in the case of the Acorn

Atom is from £120 to £300 each.
The first Econet interface
boards have been developed for
use with the Atom micro, but
Cambridge-based Acorn plans to
develop versions for other
micros. The board uses Motor-
ola's MC6854 Advanced Data
Link Controller to implement the
IBM SDLC protocol on the data
line.

The network is based on ordi-
nary four-wire telephone cable
with a clock signal on one pair
and data on the other, running at
210Kbps, although later versions
are to run at 250Kbps.

A maximum of 255 stations can
be connected to one cable and a
three-part operating system has
been developed: to run in the
central clock generator station, a
file server and a printer station,
as well as the driver program to
run in each terminal.

Commands implemented on
the system allow one station to
control another, or view its
screen, or Peek or Poke into its
memory. Messages can also be
broadcast to all stations.

First deliveries are planned for
June in the UK, at a price of
£4,350.

Wang hots up WP war

THE low-cost word processor war
has heated up even more with the
launch by Wang of its answer to
the IBM Displaywriter. Called the
Wangwriter, it is a new design not
directly compatible with Wang's
existing ranges, and is priced in
the US at \$7,500, undercutting
IBM's basic price by \$400.

Only one version of the Wang
writer is currently offered, with a
screen, detachable keyboard (un-
usual for Wang), single minifloppy
disc drive, and slow (20 cps)
daisy wheel printer. This configu-
ration is comparable to the basic
Displaywriter (CW, June 26), in
looks as well.

Wang has also announced the
Renute Cluster Facility, which
allows its OIS word processors to
act as data processing terminals on
the VS computer system. Cur-
rently OIS units can only send and
receive documents with the VS,
and cannot carry out I/O work. A
new telecommunications processor
is attached to both the VS and
OIS, and the OIS keyboards are
modified to give the required DP
functions.

First deliveries are planned for
June in the UK, at a price of
£4,350.

Put your equipment in our hands

By doing so you'll get the benefit of our experience in servicing a whole host of different manufacturers' equipment.
From a computer terminal to a sophisticated mini, we can handle it - and fast.
Our qualified engineers will operate within 8 working hours of receiving your call and they'll carry a full set of spares.
So whether your equipment includes minis, word processors or terminals, just put it all in our hands.

Food for thought

CLEANING new information to expand our professional knowledge requires some surprising skills, doesn't it? I'm thinking of the technique of eating at conference receptions, where one needs to manipulate plate, fork, glass, and notes all with two hands (unless you happen to be a Hindu god with lots of extra limbs).

I was doing this at a reception after the Online Information conference, and having munched down to the less appetising bits of food on my plate, I put it down temporarily to give my contorted fingers a rest. Up hustled a waitress, seemingly full of that all-too-common eagerness that her kind have of snatching

the food out of the mouths of customers.

Asked she, pointing to my plate, "Have you finished with this?"

I hadn't, but wishing to please as always, and considering that I didn't much care for what was left on the plate, I replied, "Yes."

She then picked up the plate, peered at it closely, and exclaimed indignantly, "But it's not finished! You haven't finished it!"

She plunked down the plate and marched off, so I didn't get a chance to discuss her theory of dialectics that lets her ask a question and then refuse to accept the answer.

Handy, isn't it?

Go to blazes!

ON the fire hose reel in our office is a sign: "Do not use hoses except in case of fire."

The mind boggles! What on earth do they imagine people would do with them? Spray them all over to live up on office party? Use them to increase the liquidity of the accounts? More likely to muffle the fire alarm when it goes off apurposely.

I understand there is a prison somewhere in which there are glass cases in the warders' offices, each containing a rifle. On every case is a sign reading: "In case of break fire this."

A Happy New Year... if you'll excuse the expression

THERE was a cartoon by Poni, published in Punch during the dark days of the Battle of Britain, in which one middle-aged lady says to another over the breakfast table, "Must you say, 'Well, we're still here,' every morning?"

I confess that seems to me the most appropriate sentiment for the New Year - "Well, we're still here."

Reflecting on the economic crisis we are in, I can't think of a time when we weren't in an economic crisis, but I suppose some crises are more equal than others.

Anyway, this is the time of the year for reviews and predictions, and as a public service I will out swamp you with any more. I will certainly not predict that some time in 1981 trade unionists will claim there will be 50 billion people put out of work by the microchip by the end of the year, nor will I forecast that Apex and

the National Graphical Association will lead a protest march to the Inms factory in Newport where they will throw their wooden shoes in the step-and-repeat machines. Speaking of the NGA, I certainly will not suggest that Kerry Packer is thinking of buying The Times and bringing in teams of kangaroos to run the new technology printing equipment. He could hardly do that when Sir Keith Joseph has a prior call on the kangaroos to take over the NEB.

It would be irresponsible of me to lead you to think that IBM is going to introduce, later in the year, its "Z" series, an ecological, energy-saving computer that uses no electricity. Teams of unemployed people would be hired to turn cranks on the side of the machine, and the heat they produce would be an extra boon to the air-conditioning industry. I can assure you that those were

not IBM spies seen lurking around Babbage's Analytical Engine in the Science Museum, trying to steal Britain's secrets.

I will not bother to predict that during the year the Japanese will devise a chip that can hold the whole of the world's knowledge in a space the size of a fly's footprint, because doubtless someone else will. It goes without saying, of course, that a professor of an American theological seminary will write a program that calculates how many angels can dance on the head of a pin.

On the social front, I need not forecast that a crusading journalist on the New Statesman will discover that bobbies at the security services have invented a computer which translates telephone conversations into Latin elegies.

In all, 1981 doesn't look as if it will be much different from 1980.

GILB'S MYTHODOLOGY

The Blue Sky path to simplicity

SIMPLICITY is our dream, a point illustrated at a recent Info-tech conference in London when the lecturer spoke about measures of software complexity.

A member of the audience won spontaneous applause from other listeners by saying: "I am interested in measures of simplicity."

If you feel simplicity inclined, perhaps you can make your simplicity dreams come true.

Due to dream about the simplest and most direct solutions to your problems. Don't give up so easily when evaluating practical and economic solutions to your dreams.

For many years I have made conscious use of the "Blue Sky" principle for system design. First, I identify my dream of the simplest and most direct solutions. I try hard to find appropriate solutions and don't give up easily.

The mere fact that clients or colleagues say: "It is impossible"

represents a personal challenge.

It is more fun to accomplish what others have said was impossible. Last month, for example, an airline told me it was impossible to divide up a 55 work-year project into smaller deliverable steps.

Common sense

Less than an hour later they agreed it could be done, and the people who had told me the task was impossible did most of the real work in identifying the solutions.

The answers were just good common sense but by using the shared dream of reducing project size and complexity, we worked until solutions began to appear. Then we bulldozed all "objections" to our ideas by finding appropriate solutions.

When you are starting on the famous Cloud Nine, you might have to give up temporarily and try Cloud Eight. Years ago, in making a publisher order-entry system, I

started on Cloud Nine.

All handwritten orders from all over the world, from bookshops, universities and private individuals, would, we dreamed, be fed directly into the computer unchanged, uncoded and without any human intervention. By the time the system was on the air, we had moved down to at least Cloud Eight.

We did have one of the world's very first publisher systems which permitted direct keying of customer names, addresses, authors and titles (product descriptions) - with all their abbreviations, variations and misspellings - into our computer.

The computer was remarkable in recognising the correct customer or product record.

Unlike all other publishers in the world, we had eliminated the need to encode a Standard Book Number before the computer could understand anything. Our system found the record for us; we didn't even need the number.

It might still surprise some readers to realise that the programming needed to perform this Cloud Nine dream was initially about 40 lines of Fortran written by a trainee.

Later, we elaborated it to several hundred lines of code in order to improve its "intelligence" (like knowing that VII and 7 were the same thing).

Codes

In another similar dream, we designed a system for a hardware wholesaler. The original designs of several suppliers stipulated a 10-digit number for all products with a check digit, of course.

The problem was that none existed and the wholesaler had been using the product codes found in catalogues of major international hardware suppliers.

Our Blue Sky dream, shared by the company president, was to avoid the problem of numbering several hundred thousand products. The exact Blue Sky dream was to use whatever they had been employing.

We settled on a design using a simple abbreviation for the supplier, VOLVO becoming Vol if it was unique, combined with the product code used by Volvo (for example PC-236-X).

The simplicity of this solution was obvious, involving no major changes in catalogues, ordering

Tom Gilb is an Indian consultant, lecturer and author on computing topics.

FOCUS

At the turn of the year..

IT IS traditional at this time of the processing year to delve into the clairvoyant database of forecast and conjecture. Focus must first look back to review the trends and enticements of the 1979 year past.

1980 was heralded as the year in which the micro revolution would reach overdrive top. In the event, it was more in underdrive bottom mode with the industry surviving relatively unscathed.

Certainly, micro power has reached the book and magazine racks as well as shelves of the local high street stores.

Discontent

But dispatches received from the micro front line have revealed discontented murmurs from sundry users who discovered, late in the acquisition stakes, that performance does not always match sales claims.

Similarly, 1980 has not proved to be the year of Prestel, videotex, Oracle or Cefix. The telephone part of the operation was more noted for substantial price increases.

The year failed to enhance the fortunes of ICL, which revealed during the period under review a stronger marketing line in graduates than machines.

After the departure of Alan Benjamin and David Firnberg from the CSA and NCC, both organisations appear to have disappeared from view along with similar oblivion for the great privacy debate.

UK computer exhibitions have also lost popularity. Compex apart, the glitter has departed together with the exhibitors and visitors.

TEN YEARS AGO

From Computer Weekly of December 31, 1970

THE Post Office announced plans for a large scale computer-based message switching network capable of dealing with 125,000 messages a day and invited major companies to tender. The project, unveiled at a New Year European conference to IBM with its revamped 4004/46 system, supplemented by the 4044/136, was to be the latter three RCA - Prime Minister Edward Heath raised the controversial issue of computer sales to the Select Committee during his presidential visit to the White House - with a NATO-embarked £5 million ICL order firmly in mind. London-based SIA envisaged reducing staff by 20% in 1971 following a revised estimate of business expansion, 50% to 35% in the company's latest projections. Another company adding computer staff was Birk Ltd, whose merger with Stewley and Co. of Workshop meant eight redundancies following its decision to employ a computer bureau service to replace its ICL 1801A installation.

Conferences, seminars and workshops have all taken a dive in Focus ratings. Non-chart movers include word processing, leasing companies and, bureaux operations.

DI magazines have moved in the opposite direction. Industry observers believe that possibly more installation time is now spent reading than operating.

The Computer Users' Year Book achieved record proportions, as did programmers' pay, and robots made a belated climb in the activity charts, surfacing at both Longbridge and Olympia.

Moving to the sharp end of the industry, the long awaited IBM i-series arrived finally, complete with Dyadic design and complex waterworks.

A hot line to the local plumber must be added to emergency phone listings; Amdahl maintained their reputation by announcing a rival product within hours of the 3081 release.

It was a year in which Focus continued its "record" of failing to win an industry award. As compensation, Focus hopes to feature in the forthcoming publication Who's Who in Computing.

Peering into the data bowl, lost cross and networks appear to form as 1981 looks like being the year of telecommunications.

Convergence will be the buzz word, whether it is British Telecom moving towards liberalisation or the user towards a totally cashless society.

EFT will rule, photons replacing electrons, fibre optics technology superceding everything else. DPMs will have to interface with the local IBM diagnostic centre as well as the next passing communication satellite.

With the erosion of the PO telecom monopoly controls, declining costs and user demand for faster communications, the DF manager will also have to make close connections with the local British Telecom manager.

The coming year looks like providing even more change and uncertainty, budgets continuing to be a critical computing factor with cost performance a major consideration. It may prove difficult to find a better slogan than the 1980 Focus Award winner: with equality for all in the ascendancy, "Equal Bytes for Women" will be an integral part of the established DF scene in years to come.

Introducing a computer too small to be a VAX, but too powerful to be anything else.

Digital's new VAX-11/750.

It will change the way you think about computers.

Imagine. A VAX™ virtual memory computer for a price that almost any organisation can afford.

A computer with virtually unlimited programming space, contained in a cabinet so small it barely takes up the corner of a room.

Imagine VAX system power available to small departments. For dedicated real-time, interactive and batch environments. Distributed throughout your organisation wherever it can improve productivity. And in a whole host of new OEM and end-user applications that were never practical before.

The VAX-11/750, from Digital Equipment Corporation, is so much computer for so little money it will literally change the way you think about computers.

VAX family compatibility.

Despite its size and price, the VAX-11/750 is totally software compatible with the larger, faster VAX-11/780 - the computer that has been setting performance standards ever since its introduction.

It has the same kind of real-time response. The same 32-bit addressing. The same powerful instruction set. The same two gigabytes of user program space.

And the VAX-11/750 runs the same VAX/VMS™ Operating

System, already proven in thousands of VAX-11/780 applications.

You get an optimising FORTRAN that is a full ANSI 77

implementation. A high-speed COBOL based on current and anticipated ANSI standards. A PL/I in the same performance class as VAX FORTRAN.

Plus highly interactive BASIC, PASCAL, CORAL and BLISS.

Because the VAX-11/750 offers total family compatibility with the VAX-11/780, you can run all your application programs on either system. Using the same data management facilities that include sequential, random and multikey ISAM. FMS for screen formatting. DATARETIVE for query and report writing.

And to make system performance complete, Digital has introduced its own RM80 Winchester disk, the latest in mass storage technology.

Distributed VAX power.

The VAX-11/750, combined with Digital's commitment to network leadership, adds a new dimension to distributed processing.

You can use the VAX-11/780 for centralised program development, and then run your applications on strategically located 11/750s.

You can link VAX computers together using DECnet™ networking software.

You can even build one comprehensive, corporate-wide network that includes PDP-11s, VAXes, Digital's large DECSYSTEMs, and your own corporate mainframe.

All working together and sharing resources.

State-of-the-art VAX reliability.

The VAX-11/750 is the industry's first "minicomputer" designed with custom LSI gate array circuits. This advanced circuitry means fewer components, lower power consumption, easier maintenance, and higher overall reliability. In fact, the VAX-11/750 is one of the easiest computers to maintain and service that has ever been developed. It can even be diagnosed over telephone lines from Digital's two Remote Diagnostic Centres in Europe. And VAX computers are supported by Digital's worldwide service organisation with more than 14,000 people in over 400 offices.

Imagine. The VAX computer is now the VAX family.

Now more people than ever can afford to bring Digital's architecture of the 80's into their applications. The VAX-11/750. It will change the way you think about computers.

For more information, contact

MICRO NEWS

by Eileen Stainer

Philips launches first small business system

A MARKET move to coincide with the New Year has been made by the Dutch multinational Philips, with the introduction of its first personal computer for the hobbyist and small business systems markets.

Philips Data Systems plans to launch the 280-based P2000 in Europe next month, although it was first shown to the public in May last year. It will be available in several configurations with prices ranging from £600 (3,000 guilders) in £3,500 (17,500 guilders).

The company broke into the video games market 18 months ago (CW, July 5) with the launch of its G7000 Videopac computer which retailed at £150.

Philips considers the current value of the personal computer market to be £400 million (2,000 million guilders) a year. This figure is likely to triple by 1984

with the business and professional user becoming increasingly important, according to the results of research projects the company has carried out.

To cope with such a market, the company has decided to distribute its systems through its business equipment outlets. Philips predicts that sales will approach two million units in 1984.

At the top of the P2000 range for £3,500 the system comprises the basic microcomputer plus a printer, VDU and floppy disc drives; while for £600, the user gets a microcomputer with 4K bytes of internal ROM and 20K bytes of RAM memory, which is expandable to 52K bytes.

Software is supplied in plug-in ROM modules called ROM-keys which come in 4, 8 or 16K form. Application programs include text processing, data entry, book-keeping and graphics, which can be

used with a colour monitor.

Basic and Pascal interpreter modules are available for the user to develop his own programs, which can be stored on Philips' minicassettes taking 120K bytes, or on mini floppy discs with a capacity of 218K bytes.

The company plans to supply a number of specific applications programs through approved software houses, which will also be available to do custom work.

In the upmarket version, Philips supplies a 12-inch, 80-character monitor, a daisywheel (25 characters per second) or matrix (80 cphs) printer, and dual floppy disc drives housed in the monitor module.

In the cheaper hobbyist version, the P2000 can be connected to a home television, giving a 40 character display using an in six different colours. An ordinary typewriter keyboard plus numerical keys comes with all configurations. A Viewdata interface is supplied

for information editing and storing, and this can be operated with a colour monitor. Modern and IEC bus interfaces are also provided.

MBM Ltd

IN a report headed "Builder's £25,000 program rewrite nightmare" in our issue dated December 11, 1980, we wrongly stated that Northampton-based distributors Midland Business Machines Limited (MBM) went bankrupt before it was taken over by Systime in January 1979.

MBM was in fact a successful and profitable company when it was taken over by Systime and we wish to apologise to the former directors of MBM for any embarrassment we might have caused them. The reference to MBM was incidental to the report, which was otherwise accurate.

Good outlook for processor market

THE microprocessor and single chip microcomputer market will exceed 650 million units a year by 1985, according to a report issued by Creative Strategies of San Jose, California. In 1980 the figure was 115 million units, indicating a compound annual growth rate of 42%.

Entitled "Microprocessors/Microcomputers", the report defines five major categories of the industry: microprocessor chips, microcomputer chips, microcomputer boards, microcomputer nucleus systems and microcomputer development systems.

Each section will show rapid growth over the next five years, according to the report. Total sales of microprocessor based products will increase, with a compound annual growth rate of 32% from \$1.2 billion in 1980 to \$5.5 billion in 1985.

Microprocessor chips alone will grow at a compound annual rate of 35%, from \$217 million in 1980 to \$963 million in 1985. The report classifies them into three distinct types: simple control, general purpose and data processing.

The report states, however, that microcomputer development systems will become less important in the industry. Sales will decrease as a percentage of total industry sales from 18% in 1980 to 8% in 1985. The reason for this, according to the report, is that each existing MDS will support more and more chips.

The MDS market will still grow 14% over the five years from \$218 million to \$422 million. In units this means an increase of 18%, from 16,000 to 37,000.

In terms of market divisions, the report shows the communications sector having the highest growth rate of 33% a year. The market value will increase from \$346 million in 1980 to \$1.4 billion in 1985. Business and education will grow from \$371 million to \$1.2 billion.

In terms of geographical segments, the US will lose market share over five years; now it takes 60% of world production, but this will decrease to 45%. Japan will increase from 14% in 1980 to 22% in 1985, with a compound annual growth rate of 44%.

64K RAM from Intel

FIRST quarter of this year should see volume quantities of Intel's 64K dynamic RAM which uses a redundancy design approach to improve yield. The device will have a 128 cycle refresh and will be housed in a standard 16-pin package.

The redundancy approach, also used by IBM and Western Electric in the 64K RAMs they produce for internal use, means that extra storage cells are incorporated on the

chip. Defective cells are replaced by the spare cells during the test procedure of the devices, thus improving the yield.

Apple II gets three months

APPLE Computer has been given another three months to bring the Apple II personal computer up to the approval of the US Federal Communications Commission. At the moment it does not comply with the Commission's technical standards.

With the Heath Corp. Apple filed a petition to the Commission, asking for an extension beyond the deadline of January 1, 1981 - already an extension on the original deadline of July 1, 1979. Both companies said that it was not granted they would be forced to close down their plants.

The regulations were announced in November 1979 (CW, November 15, 1979), so the companies have had just over a year to make the necessary changes. The problems lie with the personal computers, causing excessive radio interference.

A condition to the extension is that Apple must supply a warning label with each unit manufactured under the waiver, indicating that the equipment may interfere with radio and television reception. The user must correct the interference himself.

One of the Polls terminals in use in the House of Commons Public Information Office in Norman Shaw Buildings.

Commons online index gives backbenchers rapid access to facts

"A POSITIVE weapon" for the backbench MP in his struggles with Whitehall was how the House of Commons online index was described at its official launch by Philip Whitehead, chairman of the Commons computer sub-committee. The system, called Polls and provided on a bureau lasia by Seicon (CW, April 10), is now up and running, giving MPs the "rapid access to facts" which Whitehead (Lab, Derby N) asserted was essential to MPs' work.

Since June 11,000 answers to Parliamentary questions and Ministerial statements have been loaded on to Seicon's Univac 1100 in Milton Keynes for access by Commons library staff using terminals in the Palace of Westminster and in a nearby office building.

Problems with floppy discs wearing out and the loss of a whole day's input owing to a lightning strike have been the only sizeable difficulties, and the costs have been kept well below budget.

Outside organisations will be allowed to subscribe to Polls if they are interested, using their own dial-up terminals, provided they are approved by the computer sub-committee. They will also be able to buy copies of the 9,000-term thesaurus that has been compiled.

Next year a current awareness service is to be added to Polls, providing MPs with weekly notification of items that fit their interest "profile", and outside organisations will be able to subscribe to this as well.

Whitehead described Polls as "the first step in adapting ourselves to the changes we will have to make as the information revolution sweeps over us all." On the reluctance of MPs to accept new ways he commented wryly, "Some members would like to see a backup index written out in Victorian copper-plate for every scheme like this."

Tory MP Ian Lloyd agreed that gradual introduction of such systems was the only way to get new technology accepted in Parliament, but he added that "By the end of the decade, you won't recognise this place."

A contribution towards standardisation has been made in the adopting of the Euronet common command set for Polls' retrieval language. The Unidax retrieval software makes it particularly easy to use the thesaurus, switching back and forth between that and searches, commented Jane Wright, who is in charge of the project from the library end.

Government departments are interested in using the system, Whitehead remarked. Other computer applications within Parliament are being investigated, and when the process of switching to a computer typing system is completed, the possibility of a link between that and Polls will be explored.

In its day, the Gamma 10 was a notable success story; launched in 1963 at Slocob by Machines Bull, over 2,000 were sold throughout Europe. The only other UK-based Gamma 10 resides permanently in the Birmingham City Museum.

The machine comes complete with all software, manuals, sorter, teletypewriter, five card punches and so on - a complete collection of spares.

Its needs are fairly simple - a modern office environment and a temperature between zero and 80° F. It requires a three phase power supply, and Roger Ford at Birmingham 5027 is open to offers.

Requiescat in pace?

CAN anyone offer a good home to a venerable Gamma 10? The last machine installed in the UK, 12 years ago, is up for sale after being replaced at Berkhamsted School by a few megabytes of Apple.

Before its five years in the Groves of Academe, it was owned by Walker Crosswell, now part of IFC.

In its day, the Gamma 10 was a notable success story; launched in 1963 at Slocob by Machines Bull, over 2,000 were sold throughout Europe. The only other UK-based Gamma 10 resides permanently in the Birmingham City Museum.

DBMS launch

A DATABASE management system for Digital Equipment Corporation's VAX 11/780 is to be released in Europe through Turpin Software of Chalfont St Giles. The DBMS, called Data Base 32 comes from Florida Computer Inc. and is written in Fortran IV.

It includes a data dictionary catalogue, an English-like Query module, multiple index keys, multiple level password protection and other facilities.

Future plans include data entry and report writer options. VAX Base 32 costs £20,000, for VAX users relating VMS operating system, Fortran IV and Sort 32.

Jitters in Texas over Daxko rival

REACTIONS from the Texas Instruments sales force in the UK to the news that US company Daxko is to compete with it in the British market were so strong that they throw doubt on Texas' confidence that it could sustain a broader attack on its systems market, says Daxko president Ogale "Randy" Ray.

RAY... "They made a mountain out of a molehill."

The news that Daxko intends to fly in Texas products in Ireland, then sell them on to systems houses in Britain and Europe, came in early November. Ray says: "Texas people were running around saying 'Oh my God, we're going to be wiped out, we're going to be wiped out'. They were on the phone to Austin ITI's US headquarters in Texas) twice a day.

"They made a mountain out of a molehill. As large as it is and as entrenched as it is, if Texas is that worried it shows up some deficiencies in their UK operation."

Confident

But Texas' UK marketing manager Dave Monk merely observes that "naturally" he was in touch with the US to check the background to Daxko's proposed activities - and specifically to make sure Daxko was not breaking its purchasing contracts with Texas.

"If Daxko is adding value in significant measure then they would qualify under normal contract terms in the US", he says. "If they're planning to broker hardware and become a re-seller it is possible they wouldn't qualify", he adds, and says he remains very confident about Texas' sales.

In fact, says Ray, Daxko will be assembling in Ireland and in any case is only to compete with a very small part of Texas' UK market. It is aiming at the small OEM or systems house which takes a

handful of Texas systems per year. These customers will be offered deals which Texas' price list only allows for much higher volumes, he says.

"We're about the same on price as the Texas list", confirms Ray. "Our advantage is in the 10 systems a year market because of our better discounting policy. We can give substantial profit margins - in the order of 40% - to these companies."

"We will supply software to OEMs or systems houses to allow them to be up and running with a product quicker," Daxko already offers standard financial packages on Texas kit, says Ray, and is currently having a banking applications package written in Dublin. It will be ready by the first quarter of 1981.

The outskirts of Dublin is the location for a plant (not Dundalk as previously reported) which will be used to assemble components flown in from the US. Some parts - cabinets, for example - are to be manufactured locally. Ray was

in Ireland earlier this month finalising agreements with the Irish Development Authority and organising the factory site.

Monk counters that Texas' policy is to deal with any company, large or small, which can show itself to be a "quality company" which is financially and technically sound. He adds that discounts shown in TIEM contracts are currently based on a dollar exchange rate of £1=\$2.05, and that variations in this level are passed on direct. With the pound standing at over \$2.30 in recent months this gives an even bigger current discount, he notes.

Target

Monk also points out that Texas is under no obligation to maintain hardware which contains subsystems it does not make.

The Daxko president says that his sales target for the first year out of the new facility is some \$5 million, not the \$10 million which UK representative Nick Ashton had envisaged. But this is still substantially more than the \$1 million of sales to Europe in 1979.

AT THE CENTRE OF EUROPE'S BIGGEST & CONCENTRATED COMPUTER MARKET

COMPEC EUROPE '81

CENTRE INTERNATIONAL ROGIER BRUSSELS, May 5-7, 1981

Europe's leading showcase for minicomputers, peripherals, terminals and microprocessors attracted nearly 6,500 trade buyers to the 1980 event. Visitors came from 15 countries worldwide with the majority consisting of directors, managers, data processing managers, systems managers, systems analysts, programmers, technicians, buyers, engineers and consultants.

Compec Europe '81 is sponsored by the world's leading computer publications COMPUTER WEEKLY, SYSTEMS INTERNATIONAL, DATA PROCESSING and PRACTICAL COMPUTING with support from the leading Dutch publication COMPUTABLE. Already the demand for stand space is outstanding. Ensure your participation in this prestigious event which serves the fastest growing sectors of the computer market.

FILL IN AND RETURN THE FORM BELOW

COMPEC EUROPE '81 STAND RESERVATION FORM

To: The Exhibition Manager, Compec Europe, IPC Exhibitions Ltd, 40 Bowling Green Lane, London EC1R 0NE, ENGLAND. Please provisionally reserve stand space at Compec Europe '81 and send the undersigned more details. Name: Company: Address:

Costing system launched

A COSTING system aimed at first-time users in the printing industry has been launched by MAI, maker of the Basic Four range of small business computers. Called Compacprint, the system uses many of the British Printing Industries Federation's recommendations for costing and reporting, such as reporting on slow-moving jobs and other kinds of exception and keeping cumulative costs of labour and materials charged to each job.

Configurations include a single terminal system running on a Basic Four Model 200 and a Model 410-based system for up to eight terminals. It can either be a stand-alone system or can be integrated with other accounting, order entry and word processing systems.

It should happen to a vet!

WHEN Fido next goes to the vet, all his details complete with treatment, vaccinations in store, owner's name, and perhaps, alarmingly, the bill, may be entered into the practice computer. Varifac, marketed by B & I Mini-Computer Systems of Stroud, is announced as the first system to handle all the administrative details of the animal practice. In addition it will take

care of the business headaches of VAT returns and purchase ledgers, and print out drug and treatment labels. Hardware consists of a VDU with keyboard, printer and micro with two disc drives. Prices start at £8,900 and include full training and tailoring of programs to practice requirements. B & I foresees the spread of Varifac to dental and doctors' surgeries.

PROGRAMMERS' PAGE

Eleven for 1981

BY the time the average programmer becomes one, he's usually given up making New Year resolutions. But for those few souls left with natural optimism here are some suggestions for 1981:

Read through the computer papers, particularly CW. It's surprising how much you can learn.

Enthusiasm for new projects is hard to maintain and even when felt, it is sometimes concealed behind a cautious manner. Worth cultivating though, both for your own benefit and the light it sheds.

Standards — come to terms with the obscure bits that bring a glaze to your eye. It may take an effort to get past the terminology especially if it's not something you often use. But you can bet your boots that when you do need it, you won't have time.

Oops — mistakes are inevitable, but they can be cut down. Don't ever rush, unless it is a real emergency.

Learn a new language. Too late for evening classes now, but there are plenty of good books around.

Understand the analyst's need to amend, when he presents you with the tenth (or more) amendment to your mutilated program. He is only passing the pressure down the line.

Test ad nauseam for every conceivable contingency. Murphy's law states that any loophole will always come up during a live run.

1 and 1, 0 and 0, 2 and 2, S and S. Make a note (written) always to distinguish between them, always use a sharp pencil, always write clearly, legibly and large.

Ops usually have good reasons for crashing your program test

runs, even when it is only for lack of a nail (sorry, card). Annoying, frustrating, yes. But not a case for venting your spleen.

Notes — make them copiously as reminders to yourself and as records for those yet to be employed in the DP department. A few lines of info in the documentation or even better, comments in the program, can create instant dawn in the night of non-comprehension.

Stick to your guns when time-scale and panics are not reasonable. As the last in the line before runtime any hiccups, delays, etc tend to accumulate in the programming schedule. Co-operation within the DP department is essential, but don't make the programmer carry the burdens of the world.

HAPPY 1981

by Pamela Rowe

A quiet message in store for the shoplifter

SHOPLIFTING in the run-up to Christmas has been a cause for concern both for the overtempted or confused shopper and the struggling retailer. Now an American company claims to have found an answer in the shape of the Black Box, also known as the Mark VI Audio Subliminal Processor. This whispers, subliminally below the muzak, messages like "I am honest. I will not steal." When this is broadcast 3,000 times an hour across the store, it will, says its originator, Dr Hal C. Becker, reduce shoplifting.

The messages are formed by digital speech produced from encoded data. Actual speech is encoded, compressed and stored in ROM until required, when a synthesizer chip expands and reconstructs the data, converting it to an analogue signal to drive a speaker. A multiplier adjusts the volume to a flicker below the background music. The messages are inaudible — but only just.

Ethics

Telesensory can program the Box for a variety of uses. One interesting possibility is a subliminal "My job is important," aimed at office workers everywhere to make them work harder. Other installations may be in medical or dental clinics, banks, or travel agents (you will fly Pan-Am). It may also help in the trauma of giving up smoking or losing weight.

Becker says that his company will only sell the Black Box to "good" customers, which means, he says, no religious or political groups.

Powerful

But who defines "good"? And if it is a question of programming people rather than machines, shouldn't they at least be aware of it? Becker believes that notices displayed to the public where subliminal messages are used, will cover the case. If he is right and his products do work, they will certainly be a powerful tool — or weapon — in hands united by the law. At the moment this is all talk. The current mood of consumer protection.

Guide

Dr Becker is convinced, however, that his products do work and the theory behind them is sound. "The messages produced by the Black Box for example, can be used to guide human behaviour."

The Box uses digital speech synthesis circuit boards designed and programmed by Telesensory Systems, a privately-owned California

Problem solving department

TO end the old year, an easy resumption of problem solving — gentle on your mind.

You're sitting happy with a stack of four floppies of different sizes balanced on a spike, large one

Puzzler

THIS MAMMOTH skeletal division sum contains no clues at all in regard to actual numbers identified, but there is a nine-digit recurring decimal by the quotient (marked here by the horizontal line), commencing only digit away from the decimal point. So the first thing to do is ponder on those characteristics which are common to all fractions producing recurring decimals.

If you think the right thoughts, the divisor will be less difficult to find than might at first be imagined.

See page 17 for solution.

Fig 1. The Y-shaped pathway gives safe conduct through the minefield from the main gate to the DP department.

moves required to complete the manoeuvre. Is there a déjà-vu feeling about the second problem?

Quite right. The two are essentially the same problem. By examining the tree of all possible moves they are pronounced isomorphic. Study, and solution, of one puzzle can be applied to its isomorphs. On the other side of the pen, different approaches made by one individual can be mapped from puzzle to puzzle, and translation time between sub-stages of a problem, or between one puzzle and its isomorph measured.

On that cliffhanger may I say that next time focuses on the individual and his solution.

OP SPOT

Now's the time to... stay put!

THINGS ain't what they used to be. Until recently everything to do with computers, with the exception of micros, was growing like Topey. But the year '81 end has seen the routine 'yearning' of many computer people tempered by an unfamiliar circumspection.

A trusty register of the health of any marketplace is the rate at which jobs change hands, and this has slowed considerably over the past few months. Computer staff and those who profit by their moving around, have all noticed the difference.

Squeezed

Ops now tend to hang on to their jobs because there aren't the opportunities to hop from one site to another. There simply isn't the volume of job ads that appeared a year ago.

It's the same story for the recruitment agencies. VLI is one of the largest private recruitment agencies in the country and its marketing director and co-founder, Anthony Lambie, readily acknowledges: "We're being squeezed."

At the beginning of the year Co-Operators, the operators' branch of VLI, had 130 contractors placed in work, ranging from data prep to ops management. There are now 115, and this is the first half in growth since Co-Operators' formation in 1974.

Lambie reports that "business has been hit during the last three months but he is busy with plans for the New Year."

VLI has traditionally split its business into permanent placements and contract work. In accordance with this division, Co-Operators' dealt exclusively in

body shopping, leaving long-term recruitment to VLI's regional subsidiaries. But from January 1 all operator recruitment, both permanent and temporary, is being merged into one group.

Current wages for temporary work start at £140 for an ordinary op putting in a 40-hour week and up to £240 for a JCL writer. Roger Haylock of Co-Operators says: "We can't get enough JCL writers because nobody has bothered to train them." He regards JCL writers as operators as they are involved with production work.

Weekly rates for permanent staff start at £120 and a shift leader with four years' experience could expect to earn between £9,000 and £10,000 a year. The high demand here is for network control staff.

Consultancies generally have no set policy when a client wants to put a contractor on the payroll. Lambie, for one, is anxious to

stress that this is not a move which his own company resists, because future goodwill is worth more to business prospects than muddying wells with legal hassles. It's all a matter of negotiating a placement fee.

Lambie reckons that 1981 will be a difficult year but doesn't anticipate any mergers between the larger agencies. He thinks that some of the smaller outfits could go to the wall, and says: "Two people can run a successful agency but when business is difficult, the small firms get a decreasing proportion of what is available because they have less marketing clout."

25% down

The internal amalgamation of permanent and temporary operator placement work is being promoted by VLI as a better service

Take care with your emotions

I WAS happy to receive a free copy of Auerbach Publications' Data Center Dialog, Volume 3, Number 6, has some universally applicable advice for ops managers which Op Spot will hand on completely free of charge.

Halfway through the newsletter, after a section entitled 'Infusing New Blood Into the Data Center', is the heading 'When to Use Emotions'. The goal of the DCOM (Data Center Operations Management) should be to "display emotion only when it is appropriate," says the author.

So, if you're checked off ops manager don't walk round with a happy grin on your face. Having

kept "hostility to a minimum" and having mastered the tricky techniques of face control, you can "use emotion to produce positive results."

You can also read on and take Steps for Decreasing Tension. The mind boggles, but this is achieved without artificial stimulation of any kind because the ops manager simply has to "ensure the data center is run as efficiently as possible."

Fingers

The longest and most helpful section grapples with the problem of finger pointing. "An age-old

Perming the hair style

DON'T tell all your secrets to your hairdresser. Next time, confide in a computer.

A Norwich hairdresser, the Brian Robert salon, has just installed a system to ask clients 20 questions on the state of their hair and what they want done with it. On the basis of this it displays a graphic computer head on the VDU showing the stylist how to achieve the desired effect, and prints out advice on products, dilutions and hair-care.

Partners in the salon, Brian Seaman and Robert Smith, say that customers are very happy with the computer. "They are reassured by the scientific data — it's not just one stylist's opinion."

Asked if it was possible to fool the machine, Seaman said that if silly information was fed in, the computer halted and asked if you really wanted to carry on. If so, it flashed out an "advised not to proceed" message.

The installation was launched by Goldwell International which also supplied the existing program for perms and tints. Eventually the system will cover all types of hair treatment and be extended to look after the business side of the salon.

Partner Robert Smith measures the thickness of a client's hair to compile a perm program on the computer.

Magnuson looks at North-East

A DECISION on whether to build Magnuson mainframes at a 27,000 square foot plant in Washington, Tyne and Wear, is expected from the main board shortly.

If the go-ahead is given Magnuson expects to start production in September 1981 and the plant could also be used for repairs to European users' kit and micro-code programming.

The initiatives taken by Newcastle University in DP are a major reason behind the choice of Washington, but the exact number of jobs to be created will depend on demand.

Meanwhile Magnuson recently added a new model to the top end of its IBM-compatible M80 family. Dubbed the M80/44, it matches the performance of the IBM 4341 Group 2 while costing £60,000 less, the company says.

Value shipments of the 44 are not scheduled to begin until the third quarter of 1981, the same time as the start of 4341 Group 2 deliveries, but customers can order an existing Magnuson model now on 60-day delivery and field upgrade to the 44 during 1981.

Unix takes the stage

TWO speakers from Bell Laboratories and a consultant from Onyx are prime attractions at a seminar on Unix to be held at Nottingham University on January 5.

Discussions will centre on using the time-sharing operating system on 16-bit micros. Developed by Bell Laboratories in 1971, the system has already popular on 32-bit minicomputers.

According to the seminar organisers, the one-day event should interest universities contemplating or already running courses on Unix and for actual and potential commercial users.

The seminar contact is Judith Fletcher, Keen Computers, 5 The Poultry, Keen Square, Nottingham NG1 2HW. Tel: 0602 583254.

Job-creating system

A SYSTEM that is expected to go live in summer could create more jobs in the supply depots of the Northern Clubs Federation Brewery.

The £300,000 system will be based on an ICL 2903 and 2904 which are being installed currently at the brewery's Newcastle headquarters.

High spots of the system will be suites for plant maintenance and telephone sales. The latter application will be based on 11 video terminals, four at head office and one each at the brewery's seven UK depots.

Coveney depot manager Bill Mott said that the projected expansion plans could add more workers to his depot's existing 20-strong workforce.

Northern Clubs Federation Brewery was formed in 1919 and sells to working men's clubs primarily, but began nationwide distribution this year. Its processing is done at present by a bureau and the brewery plans to telephone sales, purchasing stock control wages applications to the new system.

Viewdata software for Univac V77

PRIVATE viewdata software to run on Univac V77 series minis has been developed by London-based DTA Computer Systems, a systems house specialising in real time applications.

Univac is to market the system, which is priced from £14,000 for a 16-port 10,000-page version based on a V77/200 and is expandable to a 1,000-port system based on four V77/200s plugged into a V77/800.

Protocols have also been developed for the mini to front-end ICL, IBM or Burroughs mainframes.

No billing or statistical facilities are offered on the system, but its

strong point is said to be its response time, with the possibility of a V77/200 responding in less than one second to all of its full complement of 256 ports when they are each requesting data every 10 seconds.

DTA's Dennis Thomas said that the queuing time depended only on how much buffer memory was allocated to data transfers. Although he had seen many large real time systems that had not worked because their designers had not understood the problems, it was surprising how much could be accomplished with just a little knowledge of queuing theory.

The system is written in the assembly language for Univac minis to run under the RTM real time monitor, and it can make use of the Promis database access system which runs under the Vortex main operating system on the V77/800.

But it could be made available to run on other makes of machine, Thomas said, and alternative distribution arrangements are being investigated.

Enhancements being developed include working with autodiallers and auto-answer terminals, for applications involving automatic collection and distribution of information.

Pet tracks down shady car dealers

DISHONEST car dealers in North London are being tracked down by the aid of a Commodore Pet personal computer, originally installed at Camden Consumer Affairs Service to work out Weights and Measures calculations. This is one of several applications for the Pet, thought up by trading standards officers in about 20 different local authorities.

The Camden staff are using the Pet to find dealers who advertise for sale in the classified columns of newspapers, without stating whether they are dealers or private individuals: an offence under the Fair Trading Act. A buyer has more rights when purchasing from a dealer than he has buying privately.

appearing in the advertisements are typed into the Pet, and any that appear three or more times are printed out for investigation.

The machine is also used for working out consumer credit table problems, although the Pet's main task is to handle the statistical calculations relating to the law on the contents of packages, which has become more complicated.

MORE OF EVERYTHING AT...

The West Centre Hotel, Lillie Road, Fulham, London April 1-3, 1981

SO SUCCESSFUL was the 1980 Peripherals Suppliers' Exhibition, that the organisers have had to make it bigger in every way for 1981.

MORE TIME — An extra day, three instead of two. Attendance in 1980 was treble that of the previous year and in the opinion of the exhibitors the RIGHT people attended.

MORE SPACE — Half as large again to accommodate all the companies that want to exhibit — already over 60 per cent of the 1980 exhibitors have re-booked.

AGAIN — Peripherals will bring together suppliers and buyers of technically sophisticated computer equipment in the relaxed atmosphere of a first-class hotel exhibition suite.

AGAIN — Peripherals is presented by the Peripherals Suppliers' Association and sponsored by "Systems International" the prominent monthly computer journal of IPC Business Press, the world's largest complex of specialist and business journals.

DATASCENE ARE FIRST

ANALYST/PROGRAMMERS

Herts. to £10,000

Our client is a well-known software house based in Hertfordshire and are located within easy reach of North London, Watford, Luton and the M1.

The current hardware consists of IBM System 34 computers plus a range of mini computers. The main area of activity revolves around first-time users. Application areas are extremely varied and successful applicants can expect a diverse and rewarding career path. The areas of involvement are the development of RPG II systems but other project areas include Basic + and Cobol.

If you have upward of 18 months' experience of either RPG II, COBOL or BASIC + and you have had systems experience albeit limited, then the company concerned would like to see you. You should have the ability to communicate at all levels and have clients liaison capabilities.

In addition to an above-average salary the company can offer 4 weeks' holidays, car expense account and car-parking facilities. M.4388

ASSEMBLER PROGRAMMERS

Central London to £10,000

A very successful business in the publishing industry requires Assembler programmers to complete its small and friendly team.

The current hardware consists of a 386/50 working under DOS and GRASP but this is expected to be upgraded in the New Year to a 4331 using DOS/VSE.

Successful applicants will be expected to familiarise themselves with current applications but will principally be involved in new work.

The company is engaged in the mailing of company products, the maintenance and updating of their mailing lists, the continuation and enhancement of their accounting routines with complete services to the publishing industry.

Their requirement is for IBM Assembler programmers who have the necessary experience to undertake projects with the minimum of supervision and candidates who fulfil this requirement may have as little as 18 months' using Assembler.

Salary will be based on experience. The company also offer 4 weeks' annual leave and season-ticket loans. D.4895

SENIOR ANALYST/PROGRAMMERS

Borehamwood Negotiable

This company is soundly established and extremely successful in the area of selling and support of mini-end microcomputers, particularly in the commercial, first-time user market place.

There are three positions available of which two will be for the support team covering the general London area and one covering Herts. and East Angles.

Applicants for these posts must possess a good working knowledge of basic accounting applications and will have controlled at least one major project accounting applications and will have controlled at least one major project where supervision of a support team was necessary. Proof of ability to liaise and effectively deal with clients and the associated areas one would expect with project control will be an advantage.

The successful applicants will join a fast growing company which offers excellent career development opportunities with all necessary additional training.

The company package includes a very competitive salary, car allowance, expenses, annual bonus, 20 days' holiday per annum, free life insurance and pensions schemes. R/4897

PROGRAMMERS ANALYST/PROGRAMMERS

City £6-£10,000

Several banks and finance houses in the City of London are looking for Programmers, Senior Programmers and Analyst/Programmers as follows:

INTERNATIONAL BANK (West Central), operating Twin PDP II, seek experienced staff at all levels for development of systems in the New Year. Applicants should either have considerable AIMS experience or alternatively exposure to BANKING SYSTEMS in a company using BASIC +, BASIC + 2 or COBOL.

COMMODITY BROKERS (East Central) offer ground floor opportunities in a new PDP installation for top-quality BASIC + 2 programmers and analyst/programmers. A purpose-built suite is being prepared and conditions of employment will be superb.

MERCHANT BANK (East Central) seek a programmer to supplement their existing team. A large PDP installation running under AIMS provides a good opportunity for young, lively programmers who must be able to demonstrate AIMS or BANKING APPLICATIONS experience. Each of the companies mentioned provide very good employment packages which include RESTAURANT FACILITIES, LOW-INTEREST LOANS and either MORTGAGE SUBSIDY or BONUS. R4818/20

SENIOR ANALYST/PROGRAMMER

London, City to £12,000

This well-known merchant bank are based in the city of London and are well served by public transport. They have recently taken delivery of an IBM System 34 computer which will serve all areas of the bank's activities. The person appointed will work initially on his or her own and liaise direct with the user departments to identify exact requirements, feasibility studies will include financial modelling and investment management. It is expected that the first phase of development will last at least one year.

The ideal person will have considerable experience as an analyst programmer using RPG II, he or she will also be able to show a mature approach and possess the ability to liaise with users at all levels.

The bank offers a considerable employment package as one would expect from a leading merchant bank and further details on this position are available by ringing Datascene quoting Ref. M/4972.

PROGRAMMERS/SENIOR PROGRAMMERS

Surrey HP 3000 £6.5-£10,000

Two internationally-known companies based in SURREY have vacancies for COBOL programmers ideally with HEWLETT-PACKARD experience. Some exposure to DATABASE is preferred and it is essential that applicants have a minimum of two years' experience gained in a COMMERCIAL environment. Typically, those interested should have worked on Mini-based application areas such as ORDER ENTRY, INVENTORY CONTROL AND FINANCIAL LEDGER SYSTEMS. Work at both sites is of a DEVELOPMENT nature and excellent opportunities for CAREER development and ADVANCEMENT exist for successful applicants. SENIOR programmers should be able to demonstrate around four years' experience which must include recent supervisory responsibilities. Systems analysis experience, though not essential, would be a decided advantage. A wide range of company benefits are available including either restaurant facilities or luncheon vouchers, health care schemes and in one case a flex-time working plan. Relocation expenses may also be reimbursed where appropriate. D.4780

PROGRAMMER/ANALYST

West Sussex to £7,000 + review

Our client specialises in clerical and financial routines for specialised industries.

The current hardware comprised in ICL 2904 operating under George II.

Applicants, who should have a minimum of 2 1/2 years' COBOL programming on ICL 19DD or 2903/4 machines and who should also have a knowledge of ICL software, will have the advantage of working closely with and under the guidance of the systems analyst. Experience of analysis work would therefore be an asset.

A negotiable salary of up to £7,000 is offered which is dependent upon experience but which is subject to review in April, 1981.

In addition the company offers a comprehensive benefits package which includes advantageous house-purchase facilities, a generous holiday allowance, sick pay scheme, company pension fund and a subsidised restaurant.

Flexitime is used within the basic 35-hour week, above which overtime is paid at favourable rates. D.4844

ANALYST

Hampshire c. £7,500

A leading name in a wide variety of electronic engine controls, fuel gauge systems and ancillary controls require an analyst to complete their small team.

The current hardware consisting of a 1900 machine is to be upgraded to an ME29 which is still to be installed.

A complete package of both financial and manufacturing systems has been running successfully for some time and the analyst will join the team at a time when existing programs have to be converted and the next phase of development begins. This will cover the introduction of on-line working and the establishment of a totally integrated accounting system.

The successful candidate will probably have 2 years' experience in the preparation of specifications although less would be accepted for any suitably qualified candidate. Experience of Sales Order Processing would be an advantage.

In addition to the basic salary the company offers a pension scheme, a subsidised restaurant and profit-related bonus. D.4837

CONSULTANTS ANALYSTS PROGRAMMERS

Croydon
London/City

Salaries to £15k

We have been retained by our client, a major international Services Company to help recruit a number of key people at all levels to fill vacancies at their London offices.

All positions require at least 2 years' practical experience of Systems and Programming work. Candidates should have a prime interest in developing systems and solving business problems.

Flexibility is vital as our client mixes programming, systems work and consultancy, therefore using each person's skills to the full.

Successful candidates are expected to participate fully in the development of the company, and as all promotions are from within, candidates should be positively career conscious.

Excellent salaries and attractive benefits are offered by this fast-growing company which include: Share Purchase Scheme; Free Medical Insurance, Free Life Assurance, Free Pension, Profit-Sharing Scheme, Relocation Assistance, as well as influence in company policies.

CW 1/1

SENIOR PROGRAMMER

Dublin £8,000-£10,000

An established international manufacturing company on the north side of the city requires a competent Programmer who has the ability to advance quickly.

Expertise in RPG II is the main requirement. However, experience of interactive systems, the manufacturing process or database techniques would be helpful for the career that is envisaged for the successful candidates.

Our client will pay a top salary for the right candidate, together with other excellent benefits.

CW 1/2

Analyst Programmers & PROJECT LEADERS

London Based to £11,000

A London-based European Systems House is seeking Analyst/Programmers and Project Leaders for their diverse operations in the UK, Germany and Holland.

Their business is mainly based on technical projects in the prime industries: Plant Process Control, Designing Minicomputers for the North Sea Oil/Petro Chemical Industry; Laboratory Automation; Mechanical Handling; Medical Systems and H.E.P. equipment are examples of their projects.

Our client is interested in candidates who have real-time mini computer experience and have worked on the following software:

DEC Honeywell Data General
Ferranti Intel Philips

Familiarity with PDP RSX11 is an added advantage, and a knowledge of several high-level languages including ASSEMBLER is necessary for these positions.

Competitive salaries plus generous benefits are offered which includes: Profit Sharing Schemes, Free PPP Medical Insurance, Relocation Assistance, and for the more senior people, a car is also included in this package.

CW 1/5

SENIOR SYSTEMS ANALYST SYSTEMS ANALYST/ PROGRAMMER

Dublin
Senior Systems Analyst
£10,500-£11,500 + Bonus
Systems Analyst/
Programmer
£9,000-£10,000 + Bonus

Our client, a market leader with a turnover of just under £100m, requires additional Data Processing personnel for major developments over the next 4-5 years.

The Senior Systems Analyst will report to the S & P Manager and the successful candidate must have at least 3 years' commercial systems experience and be able to develop new systems from scratch.

The successful Systems Analyst/Programmer will be responsible for specifying detailed systems designs from business specifications and be involved in all phases including programming and implementation. At least 3 years' systems design, plus programming in ICL COBOL is required. Progression to full Systems Analyst is assured.

CW 1/6

SYSTEMS ANALYSTS ANALYST PROGRAMMERS PROGRAMMERS

Middlesex

An international computer company wishes to recruit a number of staff from all levels to help design, produce and market their electronic Data Processing systems.

Our client's marketing and service organisations cover over 25 countries with emphasis on the USA and Europe. Manufacturing is carried out in Ireland and Germany for the European markets. Research and development play a major role in the European network.

Systems Analysts with 3 years' commercial systems and design experience are required. Knowledge of COBOL and BASIC is necessary and candidates should be capable of working in a sales environment. You will probably be involved in manufacturing or be employed with a Software House.

Analyst/Programmers and Programmers with 2/3 years' programming and systems experience in BASIC and COBOL are also needed.

If you are interested in working for this highly motivated multinational company, and would like to earn an excellent salary, coupled with the usual generous benefits associated with an organisation of this type, we would like you to contact us.

CW 1/7

SYSTEMS DESIGNERS PROJECT LEADERS

North Hertfordshire

We wish to recruit on behalf of an international design and manufacturing company — a market leader in the Process Control Industry.

Our client develops computer systems using their own hardware and software products built around PDP-11 processors. A real opportunity exists for Systems Designers and Project Leaders to develop packages and products.

Candidates should have the ability either to project teams or design software systems.

If you have been working in: Multi-Tasking; Data Communication Systems; CPU buses and peripherals or Automation Systems, we should like to hear from you. Excellent salaries and generous relocation assistance are offered plus the usual benefits associated with a company of such high standing.

PROGRAMMER SYSTEMS/ ANALYST

Dublin £8,500 +
Mortgage Assistance

A leading financial institution in Ireland is installing an IBM 4341 in 1981. To complete the development team Programmer/Analysts are required.

Candidates with 5 years in Data Processing are needed, of which at least two should have been using Assembler language, preferably IBM. Additional training in new techniques will be given.

Besides an excellent salary and low cost mortgage, other benefits in this package include a generous pension scheme.

CW 1/4

S/34 RPG II PROGRAMMER/ ANALYSTS IN CONSULTANCY

Dublin £7,000-£10,000

Our client is a major Irish accounting and management consultancy practice, employing over 550 people and providing a comprehensive range of professional services to Irish and international companies.

You will be required to work on a variety of Business systems being developed on RPG II for outside clients.

If you have at least 18 months' experience of RPG II, our client will be very interested but if you have 3 years' plus, they will still want you and will pay a real IBM System 34 experience is of particular interest.

Successful candidates will be offered a position in line with their experience and a future working to high professional standards in a company committed to individual programs for training and development.

CW 1/8

SOFTWARE INNOVATION CONSULTANTS AND PROGRAMMERS

Holland Salary up to 90,000 Guilders

A market leader in design and implementation of software systems in data communications wish to expand their Project Team.

Specialising in commercial, industrial and banking systems, a number of positions are available from Analyst Programmers to Senior Consultants.

In addition to a degree background, it is important to have had experience of data communications software using mini computers.

Major projects actively engaged upon include real-time (process orientated) systems switching and data transport network.

The Company offers in addition to a substantial salary, 1 full overseas relocation expenses, 2 holiday bonus, 3 resettlement advance, 4 initial accommodation allowance for you and your family, 5 assistance with house purchase, 6 medical station scheme, etc.

You can also expect to visit our client in Holland prior to final contract.

CW 1/9

CONSULTANTS

West London Based

Our client wishes to recruit an experienced Consultant to work in its first-class Bureau Services.

The successful applicant would be working in a small department which holds total responsibility for the company's user support division.

All our client ask from you is wide IBM MVS experience and the ability to deal with a large business system. The chosen candidates would be involved with all the Sales, Support Management and Marketing for this large Services organisation as well as being familiar with a consultancy and managerial role.

The successful candidate will be offered an above-average salary with the following additional benefits: Pension Scheme, BUPA, Sports/Social and Subsidised Meals.

If you would like to have interesting and varied work within this fast-moving company and be guaranteed excellent career prospects, please contact us.

CW 1/10

10/11/80

New Year — New Jobs

'Demand is still there for good people in 1981'

Les Clark

Las Clark is manager of recruitment services with Knight Programming Support. Although he has reservations about the immediate future he says he is "bullish".

PAUL FISHER: Can you tell me what has happened in your business this year and give me your thoughts on the immediate future?
LES CLARK: I would say that the contract market, which is basically Knight's strength, has been fairly flat for most of this year. In the Christmas run up period, we experienced a lot of activity and we are anticipating a mild boom on the contract side in the New Year.
PF: Starting from January?
LC: Yes. We've got dozens of companies looking to take on contract people in the New Year. What tends to happen is that financial years end on December 31 or March 31. The companies have to work within their budgets but when they get their new allocations — especially some of the American companies — away you go as they open up new projects.

Overseas
PF: Has the recession made much difference to you?
LC: Yes, we've felt the draught like everybody else. In terms of Knight Programming we have an advantage

that many people out in the marketplace don't have. We can change. During a recession we focus our attention on the sectors of the market which aren't being affected so much. We can go for growth areas overseas and we've opened a New York office this year. To some extent our overseas offices are a hedge against recession although the strength of the pound has hit us. Half of Knight Programming's turnover is from outside the UK.
PF: Is that 50% of placements?
LC: No, I'm talking about total group turnover. Placements are 90% UK, I would say.
PF: Do you see contracting as having a healthy long-term future?
LC: There will always be a demand for contractors in certain specific situations. If you have a conversion from, say a 1900 to a 4300 you will need a lot of basic manpower over a six to eight months period. Conversations are a prime target for our contract marketing. Other areas are databases and the highly technical parts of computing.
PF: Has contracting changed?

Risk factor
PF: Do you offer pension facilities?
LC: No, we don't. We're looking at a health insurance scheme.
PF: And holidays?
LC: No, we don't give holidays. That's the nature of the game. Contractors are earning a premium over the permanent market rates and the risk factor of being out of work is part of that.
PF: What about your permanent placements?
LC: The permanent side is the least substantial of Knight Programming's activities and only accounts for 10% of our turnover. Taking our 1980 year to date sales compared to our 1979 year to date sales we have a 30% increase on permanent placements.
Looking to 1981, I would see that trend continuing. We've opened up a regional

office in Birmingham because there is a lot of business up there.
Our regional developments have helped to contribute to the increase in permanent sales.
PF: Are there any particularly sick bits of the market?
LC: I would say operations is a sick bit of the market. The permanent market, I suppose, can be split between operations on the one hand and systems and programming on the other.
Optimistic
The operational market is dying and although we make a living, I don't see it taking any significant turn.
PF: Is that due to the recession or to technical changes?
LC: Both. In terms of 1981, I wouldn't anticipate any extra mileage in the operational side of the business.
PF: And programming?
LC: On the programming side, I would be cautiously optimistic. We've got a lot of vacancies. If 500 of the right people walked into this London office today we could place them. We could place 100 people through our Man-

chester office and 100 through Birmingham.
There's always a market for good people who, for instance, know about CICS, IMS and DLI. In a recession, we gear ourselves up to possibilities of the more senior end of the market and there is still a lot of activity at that end. We put in a recent ad for a data processing manager and had over one hundred good replies.
PF: What about school-leavers?
LC: The market for school leavers is a very cruel one. It is unsympathetic to TOPs course trainees.
PF: Why is that?
LC: We are an agent and obviously fulfil our client's requirements. If our clients want trainees, they are falling off the trees so they don't need to use us.
Responsible
PF: Where do you think the responsibility for training lies? Is it with the schools, the companies, the agencies possibly?
LC: When times are hard, people tend to regard training

as an expendable overhead. Schools are more aware of computing now and a lot of curricula contain computing studies.
PF: Would you like schools looking to the marketplace and saying, for instance, that Cobol programmers are needed?
LC: They do and nobody wants to take them. I've interviewed TOPs people who are mature and dying for a job, but nobody gives them a chance. They're away once they get a couple of years' experience. I don't see any softening in that situation in 1981.
PF: Does everybody you place have experience?
LC: Yes. On the contract side, we won't touch people until they've had about four years' experience. If we're putting out contractors to clients, they would demand from us that they've got certain levels of experience.
PF: Are wages still rising?
LC: Yes. I would expect that trend to continue at around 20%.
PF: Do you predict any mergers within the agency business during the next year?

DATA PROCESSING STAFF

Saudi Arabia Tax-free salary plus benefits

The Saudi American Bank is a rapidly expanding organisation in Saudi Arabia; we maintain three data centres in the Kingdom, each with two Perkin-Elmer 3220 computers, with 1 MB of memory each and 350 MB disc drives for on-line storage. Out of each data centre an on-line real-time banking system is run with terminals in remote locations. Now we are looking for a number of experienced data-processing professionals to take two-year contracts, with possible extension to help continue our expansion.

Systems Analysts

You should have at least three years' experience in transaction processing systems for an on-line real-time environment.
Experience of data-base management systems and automation projects for banking applications would also be expected.
You would be based at our head office in Riyadh.

Data Centre
Operations Manager

To manage our three data centres we require Managers with two or three years' experience in a similar position, preferably with Perkin-Elmer computers. You should also have experience of installing and using Datacom hardware.

For all positions we offer an attractive tax-free salary, free furnished housing and regular leave with paid air transportation for your whole family.
Please send a full CV and salary history to:
Head of Personnel Recruitment, Saudi American Bank, P.O. Box 833, Riyadh, Saudi Arabia.

SAUDI AMERICAN BANK

WE HAVE MOVED!
PLEASE NOTE NEW ADDRESS

Computer Staff Where are you going in 1981?

Our Client who specialises in large mainframe service bureau activities has asked **BLACKWOOD ASSOCIATES** to assist them in the recruitment of experienced men and women who are seeking and possess the ability to take up challenging roles within their organisation early in the New Year. Vacancies existing mainly in the Greater Midlands are for the following personnel:-

Operations, Software, Telecommunications Managers

Operating dual IBM 3033's providing a full range of Online and Batch facilities based on an extensive BSC, ASYNCH and SDLC teleprocessing network.

Systems Programmers

Required to both support existing facilities (e.g. MVS/SE RL2, JES2, TSO, IMS, TCAM, VTAM, NCP) and to help develop and implement new facilities including 3033 Systems Extensions, MVS/SP Products and IMS extended facilities.

Project Leaders, Analysts and Programmers

Experienced professionals to sustain the rate of application development required by user companies. Practical experience in the development and control of IMS DB/DC systems using either COBOL, PL/I or Assembler would be considered an advantage but should not be regarded by experienced people as a mandatory necessity.

Strategic Planners

The rate of technological change both apparent now and in the foreseeable future necessitates the provision of additional senior technically and business orientated personnel to assist in planning for a future comprising Distributed Data Processing, Electronic Office Systems and Plant Automation.

If you consider that your experience and ability qualifies you to fulfil one of these positions then our Client's senior staff will be available to discuss details directly with you at our offices on:-

Thursday 8th January and Friday 9th January, 1981, between 4.30 and 7.30.

Call in for an informal discussion with our Client or telephone Roger Carr for an application form.

Blackwood Associates
Recruitment Consultants

26 Waterloo Street, Birmingham B2 5TJ
Tel: 021-233 2921 (24 hr. service)

A Member of the CPS Group of Companies.

OUTSTANDING BUSINESS OPPORTUNITIES IN MINI COMPUTERS

We are a California-based Electronics Company. We are looking for a small number of distributors of self-employed representatives to take up franchises to sell our advanced money systems products. You will need to show substantial depth of experience in the knowledge of the microcomputer, perhaps also add to market.

Apply initially in detail, in the strictest confidence and stipulating any companies to whom you do not wish your submission to be forwarded, to Philip Smith, Philip Smith Management Consultants, 85-87 Jermyn Street, London, SW1Y 9JQ. (0811)

THE UNIVERSITY OF MANCHESTER CHAIRS IN COMPUTER SCIENCE

Applications are invited for two Chairs in the Department of Computer Science.

The other chair in the Department is held by Professor D. G. Edwards (ICI Chair of Computer Engineering). Professor F. H. Sumner (Barclay Chair in Microprocessor Applications in Industry) and Professor D. Morris (Chair of Computer Programming).

Consideration will be given to candidates with an industrial or academic background but they must be active currently in research in any field of Computer Science.

Some possible fields of interest follow but the list is not intended to be exclusive or to imply any order of priority.

Artificial Intelligence, Commercial Data Processing, Computer Aided Design, Computer Architecture, Computer Networks, Robotics, Theoretical Computer Science.

Applications (2 copies, suitable for photocopying) giving full details of qualifications, experience, research etc., and the names and addresses of three persons to whom reference may be made, should be sent by January 14th, 1981, to The Registrar, The University, Manchester M13 9PL from whom further particulars may be obtained. Closing date: 24/3/81 (0837)

SUPPLY OF DATA PREPARATION EQUIPMENT

Notice is hereby given that the West Sussex County Council wish to receive tenders for the supply of Data Preparation Equipment.

Three appropriate Tender Forms, together with copies of Conditions of Contract and a specification may be obtained on application to Head of Computing Services, County Treasurer's Department, County Hall, Chichester, West Sussex.

The County Council do not bind themselves to accept the lowest or any Tender received.

All tenders should be submitted on the above-mentioned Tender Forms and should be delivered to the County Secretary of the West Sussex County Council at County Hall, Chichester, West Sussex, in a plain sealed envelope by post on or before 12 noon on 28th January, 1981. Nothing should appear on the envelope of the envelope which would indicate the name of the sender.

TEAM LEADER / SENIOR ANALYST / PROGRAMMER £8,500-£10,500

ANALYST PROGRAMMER £7,500-£9,500

Tylin Management Systems a leading IBM Computer Bureau and Software House and subsidiary of the Tate and Lyle Group requires additional programming staff for the implementation of a network comprising 8 System 34s linked to an IBM mainframe.

- The Team Leader / Senior Analyst Programmer will
- manage a development team.
 - design systems and produce specifications.
 - visit users on site to discuss requirements, specifications, installation, user training, implementation etc.
- The Analyst Programmer will
- assist in Systems Design
 - produce program specification and write programs in RPGII
 - already have between 2½ to 5 years' experience on System 34.

Benefits include 4/5 weeks' holiday, free meals, paid overtime, non-contributory pension scheme and free life assurance.

For further details please contact:

SOFTWARE ENGINEER

The successful applicant would be required to work on design and development of advanced Real-Time machine tool CNC systems. He/She would be immediately responsible to a software leader working in a small design/development team, should have specific experience of any or all of the following (particularly if applied to machine tool control):

Software: RTL/2 MACRO-11 RSX-11M

Hardware: DECRL-11 DECPDP-11/34 TEXAS 9900 RP

or any of the following attributes:

Experience in design and production of 'Multi-tasked' 'real-time' software for time critical control applications. The testing and debugging of such software in a 'live' (real-time) environment, distributed processing (with Micros).

A knowledge of: one or preferably more assembly languages, one or more 'real-time' high level languages (e.g., RTL/2, CORAL etc.), the ability to think at 'whole' system level, computer H/W mechanisms e.g. interrupts, DMA, I/O etc. at an architectural level, plus an appreciation of the various 'states' of the 'real' micro.

He/She will be expected to liaise with the H/W design team and, in time, to assist and instruct the more junior members of the SW team.

We offer competitive salaries, attractive conditions of employment and benefits associated with a large progressive company.

Applications, from men or women, giving brief details of age, experience and qualifications for:

David Whyte, GEO Industrial Controls Limited, Mill Road, Rugby, Warwickshire. Telephone: (0788) 2121 Ext. 718. (0811)

Warwickshire. Telephone: (0788) 2121 Ext. 718.

Travicom 2

The Travicom System is the world's foremost multiple access airline reservations, ticketing and accounting system. Some 500 United Kingdom travel agents already have direct visual display connection to the east-coasting processors of 20 leading international airlines for these purposes.

The Travicom 2 System now being developed at Maidenhead will retain the world lead by increasing several-fold the power available for message switching and translation. It will operate with Packet Switched Services or with Dedicated Data Networks and will extend the range of services to include package tour, hotel, car rental, sea ferry and rail booking, ticketing and accounting.

KLM have chosen the Travicom 2 System for use throughout Holland. Other airlines and telecommunications authorities are about to do so for their countries.

If you are an experienced programmer or software engineer familiar with any of the following

* DEC or Zilog hardware * RSX-11 operating systems

* Corel, Assembler or Micro-Cobol language * Data Communications, Accounting or

Business and are interested in joining an expanding and exciting project with opportunities to travel and work abroad please contact us for more information

Computer Communications Limited

MYRIAD

INTERNATIONAL DATA NETWORKS COMMUNICATIONS ENGINEERS

£7,000-£10,000 READING BASE

Due to the increasing importance and continuing growth of the data communications industry we are seeking additional engineers to join the Product Engineering Group of the industry's market leader. The company is experiencing ever-increasing demand for its sophisticated range of data communications products and is therefore expanding its engineering and support groups to cope with significantly increased workload.

The Product Engineering Group provides a high-level technical support service to users throughout Europe. This includes the provision of a consultancy service on network design and application, system specification and costing, monitoring new development in the market and training users.

The general requirement is for candidates who are educated to degree level in either Electronics, Physics or Computer Science with post-graduate experience in either data-communications technology, digital electronics or micro-processor application.

Dealing with prospects and users throughout Europe a degree of international travel will be involved and the ability to work without immediate supervision is therefore important. The company can offer extremely bright prospects for future career development coupled to a high commencing salary and valuable conditions of employment including comprehensive relocation assistance. Telephone to discuss these opportunities in detail or alternatively write to us quoting reference SW1/0412/CW.

MYRIAD APPOINTMENTS LIMITED

30 Fleet Street London EC4Y 1AA Telephone 01-353 0981 24 hours (0806)

PROGRAMMERS MAKE YOUR NEXT CAREER MOVE TO SYSTEMS DESIGN

Salaries to £9,500 p.a.

Essex

Our client is looking for experienced programmers who would relish the opportunity to take responsibility for technical system design, and who will also be able to provide the technical leadership for the programmers on a project team.

You will be working for one of the largest and most secure international companies in their sector throughout the world. They are also highly progressive and are in the forefront of office automation. The data processing organisation has a history of expansion and offers excellent prospects of further career development.

They use twin IBM 3032 processors and have a network of 300 terminals including distributed processing supported by IBM 3730's and 8100's.

But whatever your equipment or language background, our client's major commitment to training will ensure that you will be brought right up to date on IBM equipment, and stay there.

The company will pay you an excellent starting salary of up to £9,500 p.a. together with other benefits. If you need to move house, there is a choice of attractive and affordable properties with easy reach and relocation assistance will be provided.

Call us now to find out more about these fine opportunities and your C.V. to Sue Blundell at the address below.

COMPANY NEWS

ICL's results caused shock waves in the City. KEVIN CAHILL explains why they were mis-read.

ICL blamed for City 'overreaction'

THE most depressing aspect of ICL's results was the City's reaction. One shareholder ditched half a million shares on the day the results were announced. The subsequent fall in the share price from 108p before the results to 70p afterwards reduced the market valuation by ICL by over 30%.

"This reaction, or 'overreaction' as some industry commentators see it, has been laid squarely at the door of ICL by some City analysts.

Shock

Graham Meek of stockbrokers Wood Mackenzie, a leading ICL watcher in the City, described the figures as "poor" and the explanations as "inconclusive."

He was kind. Other City sources expressed outright shock at the results, and announced at the fact that the warnings given by ICL in November had not been clear enough to indicate the extent of the trouble.

How much further ICL could have gone by way of disclosure without breaking the rules is hard to know, but what is certain is that the City understands ICL less well than it should.

At least some of the blame for this must attach to ICL. For instance, not much is known about the balance inside the company between software and hardware. The whole emphasis of chairman Philip

Chappell's presentation was on the hardware side of the business, with only a passing mention for software and services.

Yet managing director Chris Wilson, when he spoke at the BCS earlier in the year, revealed that manufacturing accounted for less than one-third of the company's resources.

This approach to the balance of the company's business has left the City with only the hardware data and the figures to respond to. This must be accounted unsatisfactory given that service revenue, including software turnover, has risen from £270 million to £300 million.

And the focus on the hardware side, on the surface (which is how ICL gave it) was not good. Sales to ICL's own leasing subsidiaries went up 100% from £86 million last year to £150 million this year.

In the long run this should mean more money for ICL, provided the leases are on a sufficiently long period and the repurchase component is low. ICL says that most are for four or five years with minimal repurchase obligations. But short-term profit figures will be affected.

ICL did not give a breakdown of the hardware sales but a spokesman later emphasised that the "postponement" of orders was occurring at the lower and upper ends of the range. Only the ME29 was ahead of target by about 20%, with orders outstanding worth

about £70 million.

The end of the range most likely to have borne the brunt of the hardware sales slowdown is the large 2960 and above.

The effect will be significant. The upper end of the 2900 range is expensive to build, expensive to warehouse and very expensive to support. Each unit could be tying up as much as £2 million in working capital, at an effective interest rate of about 16%.

ICL has never sold much of the 2900 series in America where its sales were nearly halved last year, but in places like Australia and Germany it has sold big machines and it is in these two countries that ICL is encountering Fujitsu head-on, and by all accounts suffering.

This must raise the question of whether ICL should continue with its large mainframes at all.

A spokesman at ICL agreed that the trend in sales before the recession struck was "towards the lower end of the range." However painful the surgery at Winsford and Dukinfield may have been, therefore, more may have to follow if ICL is not to discover, as it comes out of the recession, that it still does not recover sales at the top end as a result of Japanese competition.

In terms of sales ICL had a boom year in what it describes as Africa, which in practice means South Africa, for an estimated 80% of this business. Here again, ICL may be caught out if the widely expected trade embargo is imposed next year.

Fears

The huge loss sustained by the Lloyd's Insurance market has made the City sensitive to figures relating to repurchases from leases, and the fact that ICL increased its provision for repurchase from £7.8 million last year, to £19.1 million this year, caused concern.

This is more than the doubling of sales to the leasing companies would normally account for, but is still in accordance with the caution

ICL chairman Philip Chappell... only a passing mention for software and services.

ICL has exercised in this area over the years, according to a spokesman.

One City analyst expressed concern that ICL might be filling warehouses with repurchased machines and might have to face the kind of write-off announced by Burroughs last week.

ICL told Computer Weekly that its provision for repurchase was conservative and that ICL's experience this year was normal. In practice, most of the machines bought back to ICL were outright purchases originally and are being taken back at discounts on new equipment, that are decidedly low.

Pricing on the ME29 has been particularly aggressive, with the majority of purchasers offered no discount on the return of equipment. Leeds University has been offered little more than £4,000 for a working 1906.

If the value of its shares means anything to ICL, it should concentrate in the immediate future on explaining itself to the City, rather than selling itself.

With over £300 million worth of revenue coming from services and software, and a runaway success

Turnover static for NCR UK

LITTLE if any growth in turnover is expected from NCR's UK company for the year just ended, despite a good return in the terminal end non-computer banking sector.

Board director Sean Dixon-Child says there will be "no significant difference" in turnover for the year ended November 30, 1980 compared with the previous year.

The turnover last year was £32.4 million giving a profit of £9.1 million. UK turnover including hardware sales, various support, engineering and other services, the Dundee factory and a small contribution from Commonwealth countries like Cyprus, Tanzania and Kenya.

The expected lack of growth this year is put down by one City analyst to falling cost of hardware and is not unexpected. NCR in Britain is primarily a hardware company, with only an arm's length relationship to allied software sales through other companies.

Five a week

This year's expected setback comes at the end of a period in which the company's sales of cash dispensers, cheque encoders, sorters and the like to the banking sector have held up well, according to Dixon-Child.

NCR supplies cash dispensers in the Midlands, National Westminster and Barclays Banks (Lloyds), the other big clearing bank, being supplied by IBM.

NowWest is aiming to install NCR dispensers at the rate of about five a week in 1981.

Dixon-Child says NCR aimed to sell 5,000 dispensers by 1985 but that it had already sold 1,000. There are currently about 7,000 branches of the four big banks, so NCR is aiming for the major part of this market.

It also anticipates similar business in the building society sector and is developing a dispenser which will take the pass book issued to society savers.

The activities view the pass book as essential both to attract and retain savers.

Fascia success

SALES of the RTZ Fascia financial software package have passed the £1,000,000 mark. The package is designed to maintain a company's fixed assets on the new current cost accounting basis. It is sold outright, and now has over 160 users.

PEOPLE and EVENTS

New chair at Queen Mary College London

SENIOR research consultant Professor John Hille, visiting professor at Queen Mary College, London University, has been appointed to the new chair of information systems science and technology at the college.

Prof Hille, who works for ICL, will be responsible for the development of an integrated curriculum, covering the design and construction of information processing systems at all the relevant hardware and software levels.

The chair will be in the Department of Computer Science and Statistics which plans, with the Department of Electrical and Electronic Engineering, to offer in the near future, a four-year degree programme in the field of computer systems technology.

Before that, starting in October 1981, the Department will be running a degree programme in computer systems with microelectronics.

Educated at the City of London School, Prof Hille read mathematics at Cambridge. He entered the computer industry in 1956 and ran IBM's first computer service bureau in London. While working for ICL he and one of his research teams developed the concepts of the Distributed Array Processor, which carries out very high-speed calculations.

Prof Hille has been associated with Queen Mary College since 1976, during which time he has developed a new undergraduate course in advanced computing design, and has continued his research into computer architecture.

In charge of printers launch

John Ing has been appointed by Perlec International to be responsible for the launch of its range of serial printers throughout Europe, Africa and the Indian subcontinent. He joined the company as district sales manager, having previously been product marketing manager with Documentation.

Barry McTearns has joined GMS Computing as head of consultancy. He joins from Coopers and Lybrand Associates.

Bob Cardwell has joined the Daniel Triunier Consultancy and its related organisation, the Senior Computer Consultants Register, as senior partner, with responsibilities in the insurance and finance sectors. He was previously with IBM UK for 12 years, and head of management services with a major Lloyd's broker.

Derek Fay, formerly a director of Consultant Systems, has been appointed sales director at Tempairon. Another newcomer to the company is Rex Caplin, who joins as corporate project manager from the Financial Times, where he worked as corporate planning and projects executive. Two of the company's senior engineering staff have been promoted. Peter Bawen, formerly technical manager, is now applications manager, and Charles Toogood, previously senior electronic engineer, becomes engineering manager.

David Lyons will be director of Input's European field service programme. He was previously engineering services marketing manager.

Richard Mustal has been appointed data processing manager at Swift Chemicals Company. He was formerly systems manager for Prestcold.

Peter Corke has joined Hamlin Electronics as sales engineer. He was previously with Mann Components.

Graham Hallett has joined Lowndes-Ajax Computer Services as a director. He will take responsibility for the launch of new ventures in the UK. Since 1977 he has been managing director of Wollorax, the specialist IBM small systems company.

DIARY

JANUARY 6
Micrographics. IDPM Birmingham branch. Saracen's Head, Stratford Road, Shirley. 7.30.

JANUARY 13
Protection For Software. BCS Merseyside branch. Faculty of Science Lecture Theatre, Liverpool University. 6.00.

JANUARY 13
The Local Computer Scene. Past, Present and Future. IDPM Hull branch. Hull City Hall, Ferryhill Road, North Ferryhill, North Humberside. 7.15.

JANUARY 13
Artificial Intelligence - Voice Recognition. IDPM Essex branch. County Hotel, Chelmsford. 8.00.

Meeting. IDPM Scottish branch. Speaker from CBI. Glasgow.

JANUARY 15
Meeting. IBM Guide Set Group. IBM Basinghall Street, London EC1. Details: (01) 828-8104.

JANUARY 20
Communications in principle - the theory of communications and networks. IDPM W London. Oxford branch. Caversham Bridge Hotel, Reading. 7.30.

JANUARY 20

Micro Scope adds to staff

FOUR new appointments have been made at Micro Scope, as part of the company's expansion plan.

Peter Lloyd will be responsible for the company's commercial consultancy. He has been involved in processor and operating system design for 10 years, with three computer manufacturers. Before joining Micro Scope he was with Logica and Artwood Computer Systems.

Consultant/project manager is

Geoffrey Johnston has been appointed Simplan support manager at Peter Merrick Associates. He was previously with SSI International. Barry Mitchell joins the company from Data 100. He will be working as system manager for Time-Slot.

Nigel Roberts has been appointed business development manager, marketing management information systems at GSI UK. He was formerly statistician and systems analyst with ICL. Damski's advanced systems sector.

Simon Wright, who joins from Inter Europe Software Design. He was previously with Adler Business Systems as an analyst/programmer.

Sandra Williams has joined the company as an analyst/programmer, having previously worked as a systems engineer at Racal. Debbie Nees becomes junior programmer, after completing an HND in computing at the Central London Polytechnic.

Ray Cook has joined Unilever Computer Services Ltd (UCSL) as systems manager for the Southern Region. He has been in the computer industry for 17 years, and his previous employers have included Plessey and the Rank Organisation.

Gillieo Heath has been appointed sales executive at Sigma Electronics Systems. She previously worked for Marconi Space and Defence Systems as systems engineer, and later gained experience in sales and support with Elcotech.

BETA re-elects its president for 1981

CHAIRMAN of the Frank Wilson group of companies, Bryna Wilson, has been re-elected president of the Business Equipment Trade Association for the second successive year.

BETA represents the interests of manufacturers and sole concessionaires of all types of business machines and systems, computers and associated peripheral equipment in the UK.

In his acceptance speech, Wilson called for a single integrated voice, data and image communications network in British Telecom. He also criticised the high price that industry pays for energy in the UK, saying that he failed to understand how the present government, as a champion of freedom and private enterprise, could indulge in de-

liberately manipulating the price of gas for non-commercial reasons.

Wilson's involvement with the association began in 1950, when he became executive representative of his family company, Frank Wilson Filig Ltd. The company was established in 1908, and has offices in London and Southampton.

He was re-elected to the council five years ago and made vice-president in 1978. He was also honorary treasurer from 1976 to 1979.

Brian Gifford of Nexus UK and Larry Lewis of Mailing and Mechanical were elected vice-presidents of the association. The two other vice-presidents, Denis Blackwell of ICL and Rex Howell of Dymo Business Systems were re-elected.

Dave Ware and Edwin Monger have been appointed to the board at Dicoil Electronics. Ware is the company's sales director, formerly sales manager. Monger was company secretary and is now financial director.

Derek Carlton has been promoted from financial controller to financial director at the Reel-Redac group. He joined the company in 1979.

Steve Daig has joined Wilkes-PCA Data Supplies to run sales and marketing operations for the Wolverhampton and Warrington Online Stores. He joined the Wilkes group in 1978.

Ian Powers has moved from Motorola Semiconductors to develop all network and firmware products at Zymer in Uxbridge.

Mark Rowling has joined Prime as a software consultant, dealing mainly with the Ministry of Defence and national research establishments. He previously spent three years with the Ford Motor Company as a systems analyst. Joining Rowling as a software consultant is John Makolski, who formerly worked for APV Company Ltd, and Cascomp. A third new appointment at Prime is that of Mary Selow, an associate analyst who joins from ICL.

Michael Roberts has been appointed to lead the sales team at Jenson Computer Systems of Bristol. He is a member of the Scottish Institute of Chartered Accountants and the Institute of Marketing. He previously worked for Grodin Warren Engineering as a marketing director.

NEWS IN BRIEF

Deadlines met online

WOLVERHAMPTON'S Express and Star evening newspaper is the first daily publication to introduce an online news gathering service with the agreement of the unions. The introduction means reporters can transmit stories rather than phoning them in - a saving of 10 minutes per story on average.

From Tuesday December 16, journalists sat at Delta Data 2100 VDUs and transmitted their copy to a PDP-11/70.

IBM scores

LIVERPOOL University has gone to IBM rather than ICL for a machine to relieve the workload on its ICL 1906 mainframe. The four-megabyte IBM 4341 on order will support 1200 megabytes of Memorex disc storage and 40 Memorex 1377 display terminals. It will service more than 60 simultaneous terminal users.

Two Pi takeover

IBM-compatible minicomputer builder, Two Pi, is to be bought by Four-Phase Systems of Cupertino, California. Four-Phase is the firm whose distributed processing kit is built and sold under licence in Europe by Philips, the existing Two Pi parent company.

Apple windfall

APPLE Computer Inc finally placed their shares on the over-the-counter market in New York on December 12. Five million shares were offered to the public at \$22 each. By the end of the first day's trading the shares had reached \$29. This gave Apple a market capitalisation of \$1.56 billion, and made the two founders of the company, Steve Jobs and Steve Wozniak, worth together more than \$700 million.

Council preferred DEC to local firm

LEEDS-BASED Systime has been at the centre of a major controversy in West Yorkshire. It was created by the County Council's decision to order two VAX machines worth nearly £600,000 from Digital Equipment rather than from the local systems supplier.

Systime chairman John Parkinson described the council's decision as "bloody crazy" and said that his company could have supplied the VAX machines at a lower price than DEC, with a

higher UK added value.

He thought that the council had made a fundamental mistake in opting for DEC's VMS operating system rather than for Systime's Systel.

Parkinson said that Systime had not been asked to tender for the contract. Then, after heavily publicised criticisms of the council's decision by people outside Systime itself (including local politicians and the Leeds Chamber of Commerce) engineering officers of the council questioned whether

Systime could handle the job.

The VAX machines will be used for structural and traffic engineering work at West Yorkshire's Wakefield head office, and John Parkinson pointed out that Systime could have supplied the necessary applications packages just as easily as DEC.

Parkinson described the attitude of the West Yorkshire engineering executive as "entrenched".

Council engineers agreed to meet with Systime a few days after DEC was given a letter of intent,

Parkinson... "It's crazy."

mainly because of the publicity surrounding the affair. But they subsequently advised the council to stand by its decision to buy from DEC.

Oil cash

From front page

attempts to raise money with a rights issue. The City's reaction to the poor results was sharp and the revelations that the DoI have been actively seeking funds for the company has added to the pessimism about ICL.

The DoI's move seems to be part of a government strategy designed to steer ICL away from seeking public funds for its currently underfunded R&D program.

ICL's determination to maintain a product range which stretches from micros to mainframes implies that additional funds will be needed if the R&D is not to be starved. Additionally chairman Philip Chappell has stressed that conservation of cash is a priority for 1981.

Micro prizes

THE Scottish Industry/Education microelectronics working party is running a competition and offering cash prizes for microelectronic application projects in colleges throughout the country.

Brighton has a couple of microcomputer outlets. Tandy has a store that was doing well and an independent concern offers the PET. However, there is no Apple dealer in Brighton, so an authorised dealer, we hope to corner the market.

Xerox has chosen Holborn as site for its second London branch. Equipment covers the range from calculators to minicomputers and features suppliers like Apple, Hewlett-Packard and National Panasonic.

Morris Schwartz (right), manager of ICL's new Bristol showroom, with Norman Strangelova, SW area manager of the company.

High Street computer shops

THREE major companies - ICL, Xerox and Lion Microcomputers - have entered high street computer retailing with new showrooms in Brighton, London and Bristol respectively.

ICL's Computer Point in Bristol represents a departure from its UK network of Customer Centres in which there are appointment-only demonstrations of equipment.

The Bristol showroom will allow passing business people to pop in for advice and demonstrations, with particular emphasis laid on specialised software applications. They will include items of in-

terest to solicitors, estate agents and travel agents as well as general accounting and production packages.

Computer Point is situated at Brigstowe, 5 Welch Back, Bristol BS2 4SP.

Lion Microcomputers has opened its shop at 21 Bond Street, Brighton. It offers a wide hardware and software range, publications library, and a repair and maintenance service.

Executive director Andrew Margolis commented: "Currently,

Telecoms Council fails to gain support

THE Telecommunications Council has failed to gain the support of the main organisations it was set up to unite.

At its launch in November, a spokesman said he expected companies and users to be associated with the council through their trade associations and not through individual membership.

But the Business Equipment Trade Association, one of the mainstays of the new pressure group, this month withdrew its support. Council president Lord Morris said he had been opposed to this arrangement from the beginning.

It would have made the council "too remote from the issues," he

said, and would have generated conflicts of interest in delegates between their employment and their various association memberships.

Other target organisations have decided against joining after initially expressing interest, including the Electrical Engineering Association, the Telecommunications Engineering and Manufacturing Association and the British Radio Equipment Manufacturers Association.

The Telecommunications Managers' Association and two mobile radio associations are continuing their membership and Lord Morris said he was optimistic about individuals and companies joining.

EEC lists objections to IBM practices

MORE than six years after the start of its investigations into IBM's business practices in Europe, the EEC has filed a "statement of objections" against the industry giant.

Among other demands, the EEC wants IBM to stop including a minimum amount of main memory in processor prices, to make more systems software freely available to plug compatible manufacturers, and to provide interface information earlier than at present. Memorex was the main complainant to the EEC over the latter issue.

IBM pointed out that some of the objections raised by the EEC were similar to those already dealt with in US litigation and resolved in IBM's favour. It was referring to the anti-trust suits by Memorex, Telex, Calcomp and Transdata. IBM said that it was confident that it "fully complied with the rules of the EEC".

IBM will now have to respond to the EEC complaints in the form of oral presentations before the Commission. If the EEC stands fast in its complaints, IBM could appeal to the European Court of Justice in Luxembourg, whose ruling would be final.

If IBM loses it could be fined as well as being forced to change its practice in the EEC.

DATAGENERAL

Prices start from £4460 for the MP100 and £5076 for the MP200 systems. Systems range from floppy disc through cartridge to Winchester storage.

Comma offer off the shelf delivery of complete Micro Nova Packaged Systems as well as Expansion Memories, Communications Options, Interfaces and comprehensive Operating Systems Software.

Daja General Printers and Desher Terminals are also available ex-stock.
